**Subject:** September 2011 Monthly Groundwater Monitoring Submittal

**Project Name:** Defense Fuel Support Point (DFSP) Norwalk

**Item Description**

- 1 Table 1 - Summary of Groundwater Elevations, Monthly Monitoring Events
- 2 Table 2 - Summary of Groundwater Analytical Data, September 2011 Monthly Monitoring Event
- 3 Table 3 - Summary of Miscellaneous Compounds Detected in Groundwater Samples, September 2011 Monthly Monitoring Event
- 4 Table 4 - Summary of Total Fluids and Groundwater Extraction Pump Operation, September 2011 Monthly Monitoring Event
- 5 Attachment 1 – Concentration Time Series Charts – Wells PZ-5 and GMW-O-18

**Remarks**

On behalf of SFPP, L.P., an operating partnership of Kinder Morgan Energy Partners, L.P. (KMEP), CH2M HILL is transmitting the groundwater monitoring results for the September 2011 monthly monitoring event conducted at the DFSP Norwalk site. Groundwater elevations and analytical data for wells monitored during this monthly monitoring event are summarized in Tables 1 through 3, and are briefly discussed below. The operation of SFPP's extraction wells on September 27, 2011 is summarized in Table 4.

- 1) During this monthly monitoring event, Blaine Tech Services, Inc. (Blaine Tech) sampled wells GMW-36, GMW-O-15, GMW-O-16, GMW-O-18, GMW-O-19, and PZ-5 located in the southeastern area. Blaine Tech gauged these well prior to sampling, except for wells GMW-36, GMW-O-15, and GMW-O-18 due to the presence of the extraction pumps. Samples were collected from wells GMW-36, GMW-O-15, and GMW-O-18 through the wellhead sampling ports. A confirmation groundwater sample was also collected from well EXP-3 as part of the third quarter 2011 sentry monitoring event. Well EXP-3 sample results were presented in the sentry event groundwater transmittal submitted to the Regional Water Quality Control Board (RWQCB) and Restoration Advisory Board (RAB) members on October 14, 2011.
- 2) The TFE pumps in wells GMW-36, GMW-O-15, and GMW-O-18 are currently on and will continue to extract groundwater in the southeastern area for treatment. Monthly groundwater monitoring in the southeastern area will continue and groundwater conditions will continue to

be evaluated as additional groundwater monitoring and remediation system operation data are obtained.

- 3) Groundwater elevations were generally lower (0.50 to 0.69 feet) in the southeastern area since the August 2011 monitoring event. Free product was not detected in any of the wells that were gauged in September 2011.
- 4) Wells GMW-36 and GMW-O-15 are used for TFE but also have been used to monitor groundwater conditions within the extent of free product in the southeastern area. Free product has historically been detected in both of these wells. Reported concentrations of some volatile organic compounds (VOCs) (benzene, toluene, ethylbenzene, total xylenes [BTEX], and tertiary butyl alcohol [TBA]), total petroleum hydrocarbons (TPH) quantified as gasoline (TPH-g), and TPH quantified as fuel product (TPH-fp) in well GMW-36 during September 2011 were lower than concentrations reported during August 2011. Methyl tertiary butyl ether (MTBE) and tertiary amyl methyl ether (TAME) in well GMW-36 increased relative to concentrations reporting during August 2011. A decrease in TPH-g, TPH-fp, BTEX, and TBA was reported in well GMW-O-15 during September 2011. TPH-g and TPH-fp concentrations were approximately one to two orders of magnitudes lower than concentrations reported during August 2011. A slight increase in MTBE and TAME concentrations was also reported in well GMW-O-15 during September 2011. Fluctuation in concentrations of fuel constituents in wells with a historical presence of free product is expected depending on various factors such as water level fluctuation, groundwater extraction, and sampling methods.
- 5) Wells GMW-O-16, GMW-O-18, GMW-O-19, and PZ-5 are located outside the extent of free product and used to monitor the extent of dissolved-phase fuel constituents in groundwater in the southeastern area. Similar to the previous monthly monitoring events, VOCs, TPH-g, and TPH-fp were not detected in well GMW-O-19 during September 2011. MTBE (2.9 micrograms per liter [ $\mu\text{g/L}$ ]) was detected in well GMW-O-16 during September 2011; TPH-g, TPH-fp and remaining VOCs were non-detect. BTEX, MTBE, TBA, and TAME concentrations reported in well GMW-O-18 during September 2011 were approximately one to two orders of magnitude higher than concentrations reported in August 2011, but still within the range of historical concentrations for this well. TPH-g, TPH-fp, BTEX, MTBE, and TBA concentrations reporting in well PZ-5 during September 2011 were higher than the concentrations reported during August 2011. With the exception of 1,2,4-trimethylbenzene (Table 3), the remaining VOCs in well PZ-5 were not detected above the laboratory reporting limit. Concentration time series charts for wells PZ-5 and GMW-O-18 are included in Attachment 1. Fluctuation of contaminant concentrations in well GMW-O-18 is likely due to operation of the extraction pump in this well. Expansion of TFE to include well GMW-O-18 occurred in April 2010, which is generally consistent with the time period when the variability in concentrations was first apparent.
- 6) One equipment blank and one trip blank sample were collected during this sampling event. With the exception of chloroform, no VOCs, TPH-g, or TPH-fp were detected at or above laboratory reporting limits in the equipment or trip blank samples. The chloroform detection (6.3  $\mu\text{g/L}$ ) was reported in the equipment blank sample and is likely an artifact from the laboratory.

Please contact Dan Jablonski at 213.228.8271 if you have any questions.

**Notes**

--- = not detected or not applicable.

feet btoc = feet below top of casing.

feet msl = feet above mean sea level based on the National Geodetic Vertical Datum of 1929.

NC = not calculated.

NM = not measured since extraction pump was in operation.

Notes

1. The total xylenes result is the sum of m,p-xylenes and o-xylenes when detected.
2. Groundwater sample collected through a sampling port.
3. Free product was present.
4. Split groundwater sample analyzed by Calscience Environmental Laboratories, Inc. Results were evaluated to laboratory method detection limits.

Abbreviations

--- = not analyzed or not applicable.

<5.0 = not detected at or above the laboratory reporting limit shown.

NS = well not sampled due to presence of free product.

J = The analyte was positively identified, the associated numerical value is the approximate concentration of the analyte in the sample.

1,2-DCA = 1,2-dichloroethane.

DIPE = di-isopropyl ether.

ETBE = ethyl tertiary butyl ether.

MTBE = methyl tertiary butyl ether.

TAME = tertiary amyl methyl ether.

TBA = tertiary butyl alcohol.

TPH-fp = total extractable petroleum hydrocarbons quantified using a site fuel product standard.

TPH-g = total purgeable petroleum hydrocarbons quantified using a gasoline standard (C4-C13).
