1.0 INTRODUCTION

This report documents the handling and confirmation sampling of excavations and stockpiled soil associated with the soil excavation operations at the Defense Fuel Support Point Norwalk site located at 15306 Norwalk Boulevard, in Norwalk, California 90650 (Site).

This *Phase 1 Excavations and Stockpiles Confirmation Sampling Report* (Confirmation Report) was prepared by The Source Group, Inc. (SGI), on behalf of the Defense Logistics Agency - Energy (DLA - Energy). This report is one of several completion reports resulting from site-wide excavation, soil segregation and soil treatment conducted at the Site.

The remediation of soil and groundwater and the removal of light non-aqueous phase liquids (LNAPL) has been on-going since 1995 and has resulted in the removal of the majority of the LNAPL from the shallow aquifer and the removal and destruction of thousands of pounds of hydrocarbons present in soil and groundwater using extractive and *in situ* treatment methods. The primary sources of contamination (tanks and pipelines) associated with former DLA – Energy operations have also been removed.

To implement additional source removal, DLA proposed excavation of soil with on-site treatment. The soil removal and proposed confirmation sampling was proposed in SGI's Soil Remediation Action Plan (SGI, 2014), conditionally approved on January 7, 2015 by the RWQCB. The soil excavation is also conducted following the South Coast Air Quality Management District (SCAQMD) site-specific soil excavation and treatment permits No. 566483 and 568793.

On July 9, 2015, SGI submitted to RWQCB a Proposed Addendum to the Soil Cleanup Goals (SGI, 2015c) to clarify the hydrocarbon ranges and include longer-chain hydrocarbons (with >C25 carbon chain), and RWQCB indicated that these updated cleanup goals are acceptable for the Site.

The soil treatment, confirmation sampling and backfilling procedures for the site were presented in SGI's June 15, 2015 *Revised Field Sampling and Analysis Plan and Sampling Strategy* (SGI, 2015a) and the June 15, 2015 *Work Plan for VOC Analyses Results Validation* (SGI, 2015b).

DLA is submitting excavation-specific reports of excavation confirmation sampling results to request RWQCB's approval to backfill. In addition, DLA is submitting individual reports on clean soil piles (soil segregated as clean during excavation) to be used for backfilling. This report presents the details and results for excavations and stockpiled soil in the northeastern part of the Site, as a Phase 1 set of excavations and stockpiles in the area of the Site scheduled to be transferred to the City of Norwalk as a future park area. After RWQCB approval for re-use of clean soil, DLA will submit to RWQCB reports on the backfilling of excavations to document where the reuse soil was used at the site. When all site excavation has been completed, this Confirmation Report will be incorporated by reference within a site-wide soil remediation completion report.

This Confirmation Report includes data for excavation #3, #4, #5 and #14, and for clean stockpiles #CS-1, CS-2A, CS-10, CS-12 and CS-14.

2.0 EXCAVATION AREAS

Figure 1 presents a site map that provides the locations of Excavations #3, #4, #5, and #14. This completion report provides excavation-specific information.

2.1 Description of Excavations

Soil removal in Excavation #3 was conducted in March, 2015. A total of 1,042 cubic yards were excavated, with 435 cubic yards segregated in the field as clean soil, an estimated 597 cubic yards observed in the field to be contaminated based on observations of hydrocarbons, and 10 cubic yards exceeding 50ppmv as measured by a field Photo Ionization Detector (PID). The excavation #3 was later further excavated into excavation #14 which was wider and deeper than excavation #3, therefore, excavation #3 is considered non-existent and incorporated into the later, larger excavation #14. Excavations #14 and #4 were joined during soil removal, as shown on Figure 2.

Soil removal in Excavation #4 was also conducted in March, 2015. A total of 1,845 cubic yards were excavated, with 143 cubic yards segregated in the field as clean soil, 1,564 cubic yards observed in the field to be contaminated based on observations of hydrocarbons, and 138 cubic yards exceeding 50ppmv based on PID readings. During soil removal at excavation #4, approximately 600 cubic yards of soil (790 tons) was observed to contain oily material with low volatility and a tarry appearance. This soil was segregated separately, tested and profiled, and hauled off site for disposal at Waste Management's Simi Valley facility. At two locations in Excavation #4, the initial floor samples were found to contain hydrocarbons above cleanup goals, and the soil was excavated, and new floor confirmation samples were collected. Soil removal in Excavation #14 was conducted in March 2015. A total of 2,112 cubic yards were excavated, with 942 cubic yards segregated in the field as clean soil and 1,170 cubic yards observed in the field to be contaminated based on observations of hydrocarbons.

The removal of soil in excavations 3, 4, and 14 targeted previous direct-push boring DPT-158, 158-S2 to 158-S4, which documented hydrocarbons above cleanup goals to 7.5 feet, with four auger samples at 10 to 25.5 feet (DPT-158) with no detectable hydrocarbon concentrations.

Soil removal in Excavation #5 was conducted in April, 2015. Excavation #5 was approximately 40 feet long in an east-west direction and 40 feet north-south, with a depth of 5 feet. Of the total soil volume—approximately 340 cubic yards—315 cubic yards was segregated in the field as clean soil; 25 cubic yards were observed in the field to be contaminated based on observations of hydrocarbons, and 10 cubic yards exceeded 50ppmv based on PID readings. Excavation 5 targeted hydrocarbons identified in direct push boring in DPT-156, which also documented the absence of detectable hydrocarbons in deeper samples at 10, 15 and 19.75 feet below grade.

2.2 Confirmation Sampling Results

2.2.1 Excavation #4 and #14:

Figure 2 shows the plan view outline of excavations 4 and 14. Figures 3 and 4 are “box” completion diagrams of the final completed excavations prior to backfilling with the location of confirmation samples. The actual shape of each final excavation is not a symmetrical box. The purpose of the diagram is to facilitate the visualization and interpretation of the final sidewall and bottom characterization of each excavation area prior to backfill. Soil samples were analyzed for total petroleum hydrocarbons (TPH - carbon chain characterization) using EPA Method 8015M and for volatile organic compounds (VOCs), including benzene, toluene, ethyl benzene, and xylenes, and gasoline range organics (GRO) using EPA Method 8260B. Tables 1 and 2 present the results of confirmation samples and comparison with the Cleanup Goals for Total Petroleum Hydrocarbons (TPH) and Volatile Organic Compounds (VOCs). Appendix B contains the laboratory reports.

- 132 sidewall samples were collected, including 12 samples collected on July 1, 2015 as validation samples or as additional samples requested by RWQCB. All sidewall samples were found to be below cleanup goals
- 27 final floor samples were collected including 2 samples collected on July 1, 2015 as validation samples or as additional samples requested by RWQCB. At two locations in excavation 4 (F4 and F10; Figure 3), the initial floor samples were found to contain hydrocarbons above cleanup goals, and the soil was excavated, and new floor confirmation samples were collected. All floor samples were found to be below cleanup goals

2.2.2 Excavation #5

Figure 5 is a “box” completion diagram of the final completed Excavation #5 prior to backfilling showing the confirmation samples locations. Soil samples were analyzed for total petroleum hydrocarbons (TPH - carbon chain characterization) using EPA Method 8015M and for volatile organic compounds (VOCs), including benzene, toluene, ethyl benzene, and xylenes, and gasoline range organic (GRO) using EPA Method 8260B. Tables 2 and 3 present the results of confirmation samples and comparison with the Cleanup Goals. Appendix B contains the laboratory report.

- 28 sidewall samples were collected from Excavation #5, including 4 samples collected on July 1, 2015 as validation samples or as additional samples requested by RWQCB. All sidewall samples from the north were found to be below cleanup goals.
- Four floor samples were collected from Excavation #5, including one sample collected on July 1, 2015 an additional sample requested by RWQCB. All floor samples were found to be below cleanup goals.

2.3 Excavation Confirmation Sampling Summary

The results of confirmation sampling conducted after initial and additional excavations in Excavation areas 3, 4, 5 and 15 indicate that all residual TPH and VOV concentrations are below cleanup goals

2.4 Backfilling

Backfilling of the excavation will be conducted after approval by the RWQCB of reuse of specific clean soil piles.

3.0 STOCKPILES CONFIRMATION SAMPLING

The excavation of areas of hydrocarbon contaminated soil at the Site resulted in the removal of overburden soil that was confirmed in the field by PID screening and visual observations to be non-contaminated. That soil was stockpiled at the Site and five stockpiles were placed in the northeastern, Phase 1, part of the Site. The location, origin and confirmation sampling of these stockpiles are further presented in the following sections.

3.1 Stockpile Origin and Location

Figure 6 presents the location of the five Phase 1 stockpiles generated during multiple excavations at the Site: C-CS-01-EX14-SP01, C-CS-02A-EX11-AP01, C-CS-10-EX05-SP01, C-CS-12-EX19-SP01, and C-CS-14-EX26-SP01.

The origin and location of the stockpiled soil are documented as follows.

3.1.1 Stockpile Number C-CS-01-EX14-SP01

This stockpile originated as soil segregated as clean soil during excavation of Excavation Numbers 2, 3, and 14 in the northeastern part of the Site. This stockpile is located in the northeastern part of the Site.

3.1.2 Stockpile Number C-CS-02A-EX11-SP01

This stockpile originated as soil segregated as clean soil during excavation of Excavation Number 11 (former Basin 55004), topsoil, and berm soil from adjacent basin 80008. This stockpile was initially located in Basin 55004 in the southeastern part of the Site, but was relocated to Basin 80017 (also in the southeastern part of the Site) to accommodate the expansion of Excavation 19 in Basin 55004.

3.1.3 Stockpile Number C-CS-10-EX05-SP01

This stockpile originated as soil segregated as clean soil during excavation of Excavation Numbers 4 and 5 in the northeastern part of the site, and topsoil from the same excavations. This stockpile is located in the northeastern part of the Site.

3.1.4 Stockpile Number C-CS-12-EX19-SP01

This stockpile originated as soil segregated as clean soil during excavation of Excavation Numbers 16, 26, 27 (former Basin 80008) and 19 (former Basin 55004). This stockpile is located in the eastern part of the Site.

3.1.5 Stockpile Number C-CS-14-EX26-SP01

This stockpile originated as soil segregated as clean soil during excavation of Excavation Numbers 26 and 27. This stockpile is located in Basin 80017 in the southeastern part of the Site.

3.2 Stockpile Volume, Sampling, and Findings

Tables 3 and 4 list the results of TPH and VOC analyses of the confirmation samples from stockpiles. The laboratory reports are included in Appendix B.

3.2.1 Stockpile Number C-CS-01-EX14-SP01

The volume of this stockpile was estimated at 933 cubic yards. According to the sampling protocol for soil reuse as described in the *June 15 Revised Field Sampling and Analysis Plan and Strategy, Table 2, Sampling*, a total of 24 initial soil samples were collected for characterization of the soil pile and compared to the strictest cleanup goal for soil to be inserted at a depth of over 5 feet below grade. On July 1, 2015, 10 additional samples were collected and analyzed for data validation or at the request of RWQCB, including samples collected from the middle (M samples) and lower (L samples) interior portions of the soil pile. All TPH and VOC analyses results were below the strictest cleanup goals.

3.2.2 Stockpile Number C-CS-02A-EX11-SP01

The volume of this stockpile was estimated as 900 cubic yards. According to the sampling protocol for soil reuse as described in the *June 15 Revised Field Sampling and Analysis Plan and Strategy, Table 2, Sampling*, a total of 29 initial soil samples were collected for characterization of the soil pile and compared to the strictest cleanup goal for soil to be inserted at a depth of over 5 feet below grade. On July 1, 2015, 10 additional samples were collected and analyzed for data validation or at the request of RWQCB, including samples collected from the middle (M samples) and lower (L samples) interior portions of the soil pile. All TPH and VOC analyses results were below the strictest cleanup goals.

3.2.3 Stockpile Number C-CS-10-EX05-SP01

The volume of this stockpile was estimated as 600 cubic yards from the survey data. According to the sampling protocol for soil reuse as described in the *June 15 Revised Field Sampling and Analysis Plan and Strategy, Table 2, Sampling*, a total of 26 initial soil samples were collected for characterization of the soil pile and compared to the strictest cleanup goal for soil to be inserted at a depth of over 5 feet below grade. On July 1, 2015, 9 additional samples were collected and analyzed for data validation or at the request of RWQCB, including samples collected from the middle (M samples) and lower (L samples) interior portions of the soil pile. All TPH and VOC analyses results were below the strictest cleanup goals.

3.2.4 Stockpile Number C-CS-12-EX19-SP01

The volume of this stockpile was estimated as 4,550 cubic yards from the survey data. According to the sampling protocol for soil reuse as described in the *June 15 Revised Field Sampling and Analysis Plan and Strategy, Table 2, Sampling*, a total of 32 initial soil samples were collected for characterization of the soil pile and compared to the strictest cleanup goal for soil to be inserted at a depth of over 5 feet below grade. On July 1, 2015, 14 additional samples were collected and

analyzed for data validation or at the request of RWQCB, including samples collected from the middle (M samples) and lower (L samples) interior portions of the soil pile. All TPH and VOC analyses results were below the strictest cleanup goals.

3.2.5 Stockpile Number C-CS-14-EX26-SP01

The volume of this stockpile was estimated as 2,460 cubic yards from the survey data. According to the sampling protocol for soil reuse as described in the *June 15 Revised Field Sampling and Analysis Plan and Strategy, Table 2, Sampling*, a total of 31 initial soil samples were collected for characterization of the soil pile and compared to the strictest cleanup goal for soil to be inserted at a depth of over 5 feet below grade. On July 1, 2015, 13 additional samples were collected and analyzed for data validation or at the request of RWQCB, including samples collected from the middle (M samples) and lower (L samples) interior portions of the soil pile. All TPH and VOC analyses results were below the strictest cleanup goals.

3.3 Additional Analysis

In addition to the analyses for hydrocarbons and VOCs, five samples (one from each stockpile) were also analyzed for Poly Aromatic Hydrocarbons (PAHs) by USEPA Method 8270 SIM, and for Polychlorinated Biphenyls (PCBs) by EPA Method 8082. The results are listed on Tables 4 (PAHs) and 5 (PCBs). The results indicated that PAHs and PCBs concentrations were below detection limits and therefore are not a concern of this site.

In addition to these analyses for PAHs and PCBs, SGI also conducted in 2014 a site-wide evaluation of metal concentrations in soil at the site. That investigation, included as Appendix C, indicated that metals are not a concern at the site.

3.4 Summary of Stockpile Confirmation Sampling

The sampling and analyses of confirmation soil samples from the five Phase 1 stockpiles indicate concentrations of TPH and VOCs below the strictest approved cleanup goals for the Site.

4.0 CONCLUSIONS AND RECOMMENDATIONS

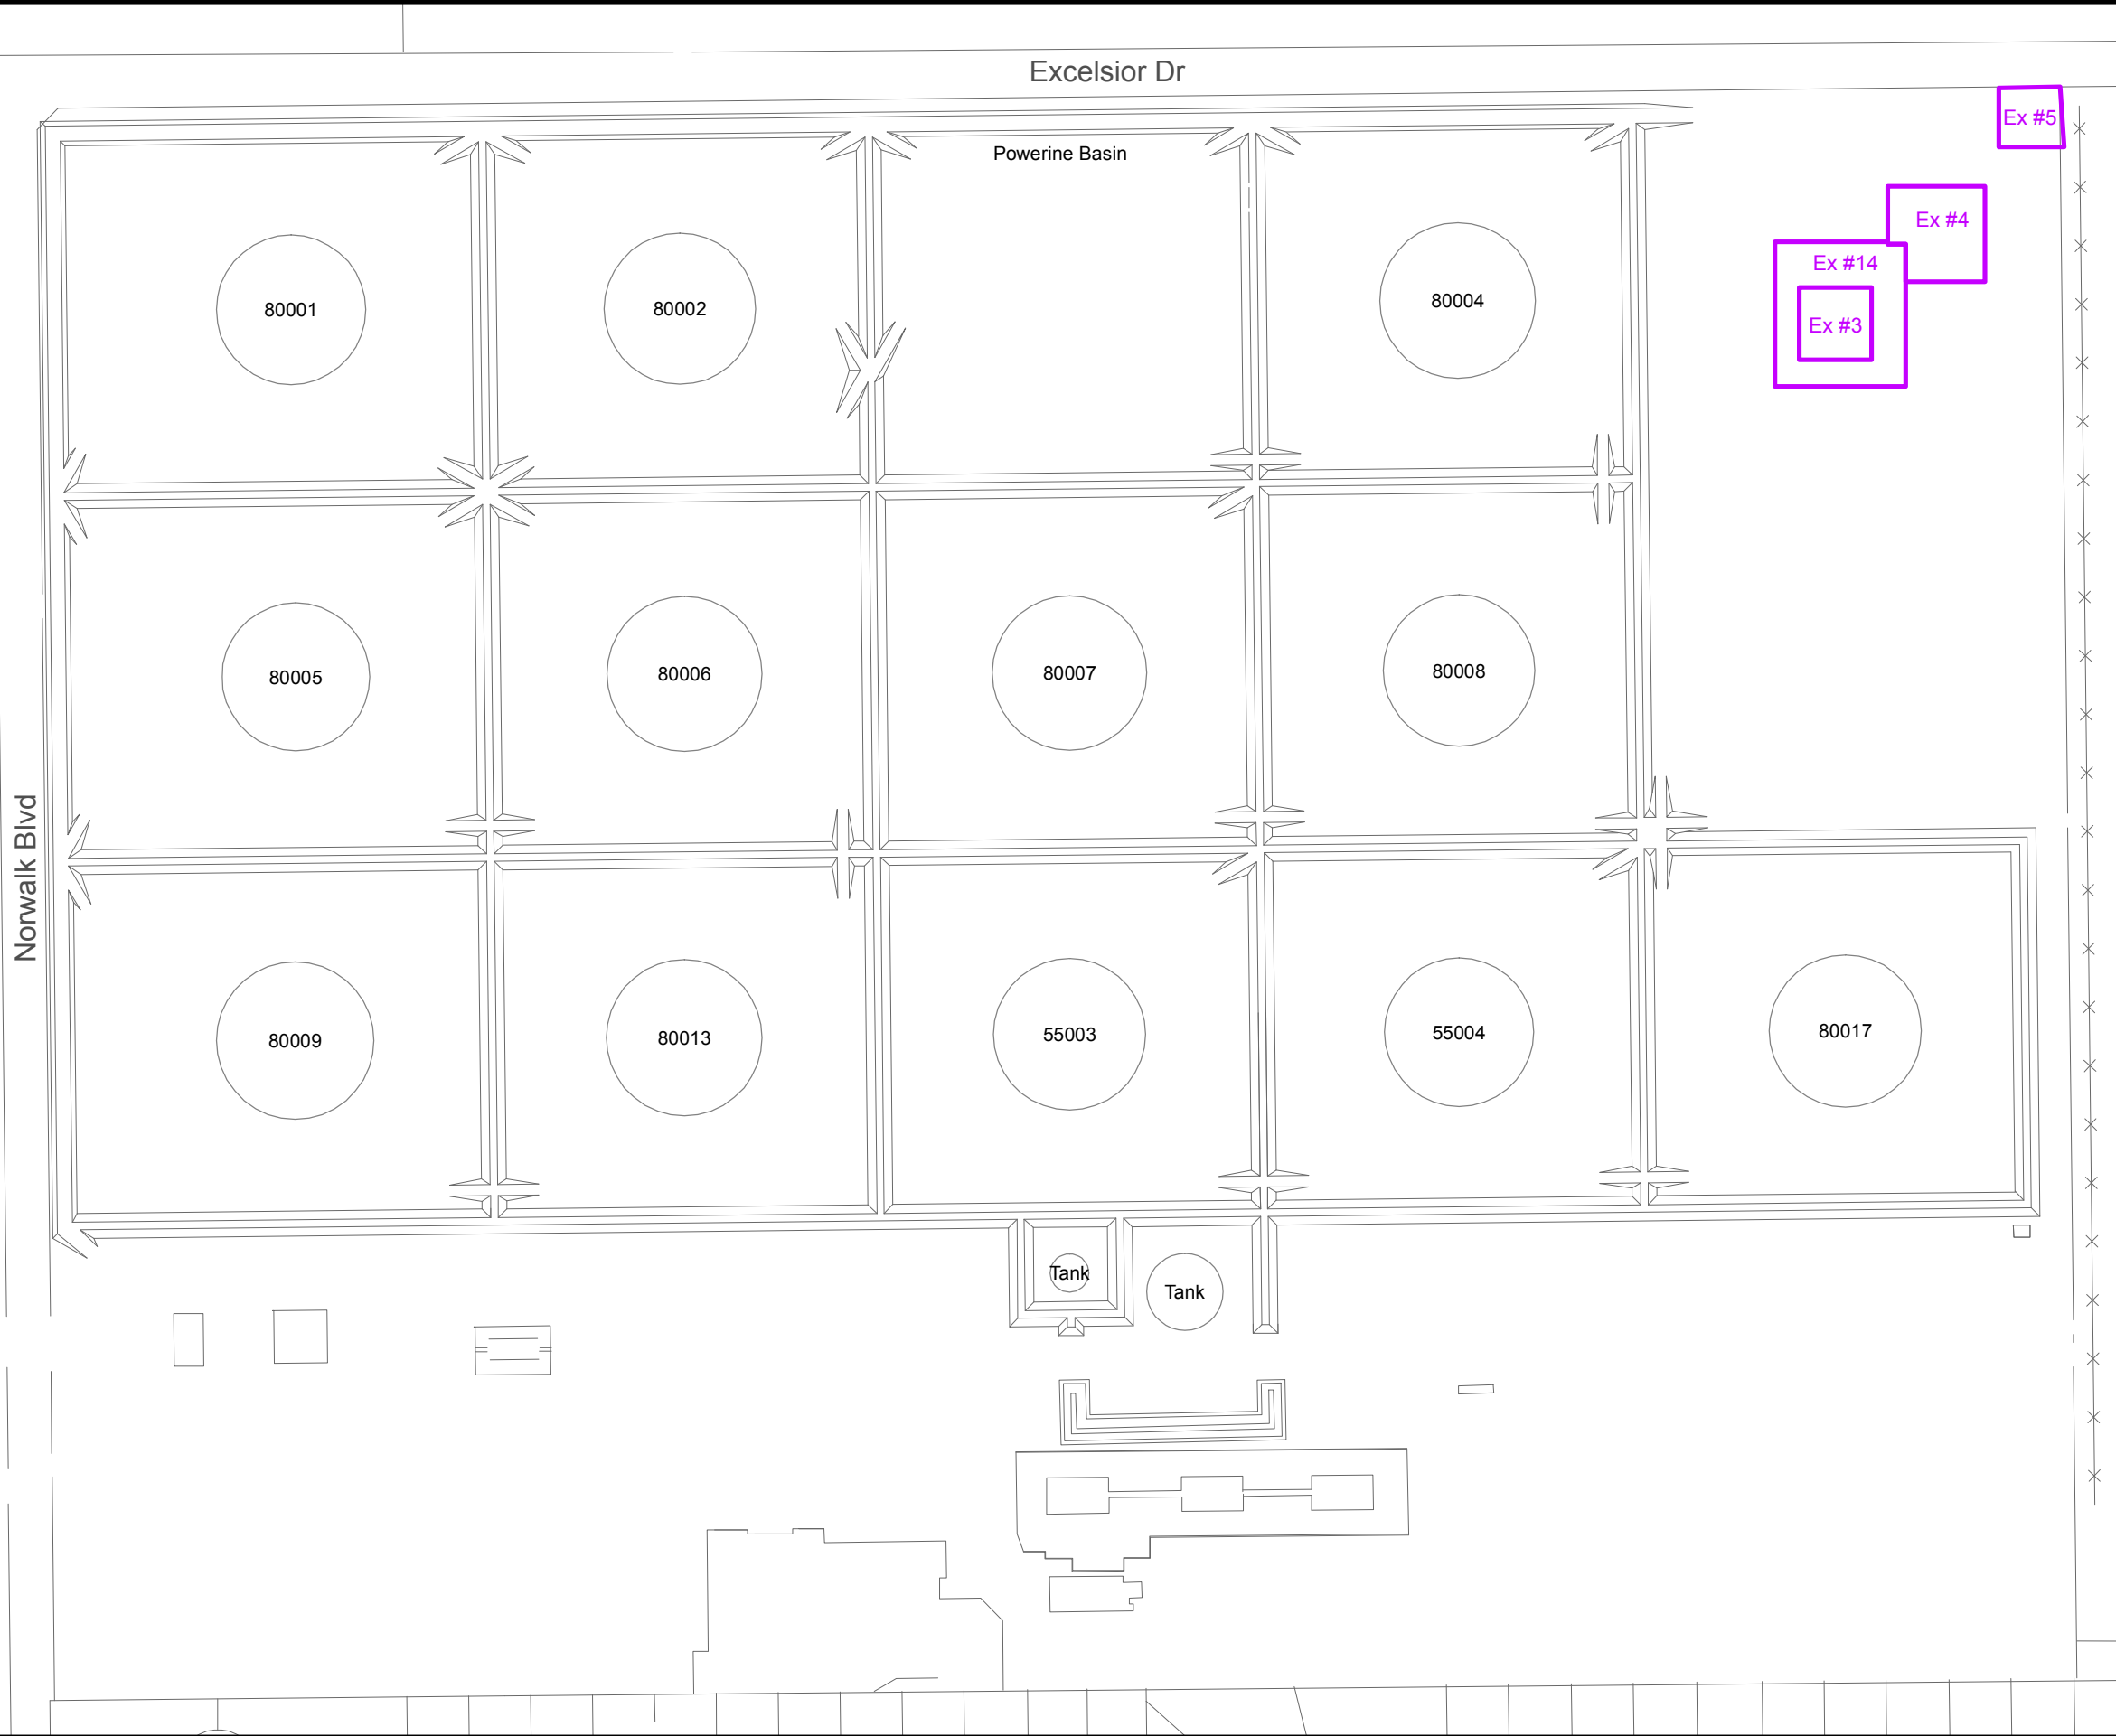

The results of sampling of excavations indicate that all final in-situ confirmation samples concentration of TPH and VOCs in Phase 1 excavations 4, 14 and 5 were below cleanup goals. The results of sampling of stockpiles indicate that the five Phase 1 stockpiles (CS-1; CS-2A; CS-10; CS-12 and CS-14) do not contain hydrocarbons or VOCs at concentrations above the strictest soil cleanup goals, and that the soil from these stockpiles is therefore adequate for backfilling of the Phase 1 excavations.

Based on the results of confirmation sampling of excavations and stockpiles, DLA requests that RWQCB approve backfilling of two Phase 1 excavations using soil from the five Phase 1 stockpiles.

NOTES

- Shape of Soil Pile is Schematic
- Sample Label 226 Represents Sample ID C00226-CS-12-226
- Sample Label 213/213-JD Represents June Duplicate Sampling
- Samples were Collected approximately 2 feet Deep into the Soil Pile. Selected Samples were Collected from the Interior of the Pile at Mid_Depth (M) and at the Lower Level of the Pile (L)
- Samples were Collected approximately Every 31 feet along the Edge and Randomly at the Top
- The Volume of the Soil Pile is approximately 4,500 Cubic Yards and a Total of 46 Samples were Collected. Soil Pile has an Average Height of 10 feet

NOTES

Shape of Soil Pile is Schematic

Sample Label 179 Represents Sample ID C00179-CS-14-179

Sample Label 202/202-JD Represents June Duplicate Sampling

All Samples were Collected approximately 2 feet Deep into the Soil Pile. Selected Samples were Collected from the Interior of the Pile at Mid-Depth (M) and at the Lower Level of the Pile (L)

Confirmation Samples were Taken Approximately Every 20 feet along the Edge of the Pile

Confirmation Samples were Taken Randomly at the Top of the Pile

The Volume of The Soil Pile is approximately 2,460 Cubic Yards and a Total of 44 Samples were Collected. Soil Pile has an Average Height of 9.5 feet

EX-5-W1-1-JD *	1	7/1/2015	<0.50	---	---	---	---	---		A5331396

Notes: Initial Samples were reported in even Carbon Chain ranges, and C6-C12, C13-C22, C-23-C32 and C33-C44 were calculated; later TPH ranges were reported directly by laboratory.
 All concentrations are presented in milligrams per kilogram (mg/kg).
 Detections are shown in **bold**.
 ft bgs = feet below ground surface.
 C13-C22 = carbon chains ranging from C13 through C22.
 TPH = total petroleum hydrocarbons.
 <1.0 = not detected at or above the indicated laboratory reporting limit.
 -- = not applicable.
 * = resampled locations.
 Hydrocarbon Chain Identification by EPA Method 8015B(M).
 GRO by EPA Method 8260B/5035.

Notes: All concentrations are presented in milligrams per kilogram (mg/kg).
 Detections are shown in bold.
 ft bgs = feet below ground surface.
 <0.050 = not detected at or above the indicated laboratory reporting limit.
 --- = not applicable.
 * = resampled locations.
 VOCs = volatile organic compounds.
 VOCs by EPA Method 8260B/5035.

Notes: C00066 = sample #66 from clean soil pile C-CS-01-EX14-SP01.
 Initial Samples were reported in even Carbon Chain ranges, and C6-C12, C13-C22, C-23-C32, and C33-C44 were calculated;
 Later TPH ranges were reported directly by laboratory.
 All concentrations are presented in milligrams per kilogram (mg/kg).
 Detections are shown in **bold**.
 * = resampled locations.
 ft bgs = feet below ground surface.
 mg/kg = milligrams per kilogram.
 C6-C12 = carbon chains ranging from C6 through C12.
 TPH = total petroleum hydrocarbons.
 GRO = gasoline range organics.
 <1.0 = not detected at or above the indicated laboratory reporting limit.
 --- = not applicable.
 Lower = soil sample was collected from the lower portion of the clean soil pile using an excavator.
 Middle = soil sample was collected in the middle portion of the clean soil pile using an excavator.
 Hydrocarbon Chain Identification by EPA Method 8015B(M).
 GRO by EPA Method 8260B/5035.

APPENDIX A
SURVEY MAP

DATUM:
 HORIZONTAL:
 North American Datum of 1983 (NAD83)
 CCS'83, Zone V (0405) , (2011.00 epoch)
 Based on California Real Time Network (CRTN) Station "BLSA"
 BENCH MARK:
 Los Angeles County Dept. of Public Works
 Designation: CY 8835 (Artesia Quad)
 Description:
 CS BM MON IN S END C.B. 1M(3.3) N/O BCR @ NW COR
 ALONDRA BLVD & NORWALK BLVD MKD (BM 41-7A 1970)
 Elevation= 69.014 feet (NGVD'29)(1980 adj.)

NOTE:
 Propertyline information on this map is shown for reference purposes only. "Record Data" was used to generate all propertyline information on this map. No monument search or field boundary survey has been performed for the creation of this map.

This map correctly represents a survey made by me or under my direction in conformance with the requirements of the Professional Land Surveyor's Act at the request of The Source Group, Inc. in July, 2015.

**Re : DFSP Norwalk Soil Remediation / 04-NDLA-007
A5331296 / 5D08013**

Enclosed is an analytical report for the above-referenced project. The samples included in this report were received on 04/08/15 16:38 and analyzed in accordance with the attached chain-of-custody.

Unless otherwise noted, all analytical testing was accomplished in accordance with the guidelines established in our Quality Assurance Program Manual, applicable standard operating procedures, and other related documentation. The results in this analytical report are limited to the samples tested and any reproduction thereof must be made in its entirety.

If you have any questions regarding this report or require additional information please call me at American Analytics.

Sincerely,

Viorel Vasile
Operations Manager

**Re : DFSP Norwalk Soil Remediation / 04-NDLA-007
A5331341 / 5E11017**

Enclosed is an analytical report for the above-referenced project. The samples included in this report were received on 05/11/15 14:02 and analyzed in accordance with the attached chain-of-custody.

Unless otherwise noted, all analytical testing was accomplished in accordance with the guidelines established in our Quality Assurance Program Manual, applicable standard operating procedures, and other related documentation. The results in this analytical report are limited to the samples tested and any reproduction thereof must be made in its entirety.

If you have any questions regarding this report or require additional information please call me at American Analytics.

Sincerely,

Viorel Vasile
Operations Manager

**Re : DFSP Norwalk Soil Remediation / 04-NDLA-007
A5331389 / 5F29020**

Enclosed is an analytical report for the above-referenced project. The samples included in this report were received on 06/29/15 15:40 and analyzed in accordance with the attached chain-of-custody.

Unless otherwise noted, all analytical testing was accomplished in accordance with the guidelines established in our Quality Assurance Program Manual, applicable standard operating procedures, and other related documentation. The results in this analytical report are limited to the samples tested and any reproduction thereof must be made in its entirety.

If you have any questions regarding this report or require additional information please call me at American Analytics.

Sincerely,

Viorel Vasile
Operations Manager

**Re : DFSP Norwalk Soil Remediation / 04-NDLA-007
A5331393 / 5G02004**

Enclosed is an analytical report for the above-referenced project. The samples included in this report were received on 07/02/15 07:45 and analyzed in accordance with the attached chain-of-custody.

Unless otherwise noted, all analytical testing was accomplished in accordance with the guidelines established in our Quality Assurance Program Manual, applicable standard operating procedures, and other related documentation. The results in this analytical report are limited to the samples tested and any reproduction thereof must be made in its entirety.

If you have any questions regarding this report or require additional information please call me at American Analytics.

Sincerely,

Viorel Vasile
Operations Manager

**Re : DFSP Norwalk Soil Remediation / 04-NDLA-007
A5331283 / 5C25030**

Enclosed is an analytical report for the above-referenced project. The samples included in this report were received on 03/25/15 16:03 and analyzed in accordance with the attached chain-of-custody.

Unless otherwise noted, all analytical testing was accomplished in accordance with the guidelines established in our Quality Assurance Program Manual, applicable standard operating procedures, and other related documentation. The results in this analytical report are limited to the samples tested and any reproduction thereof must be made in its entirety.

If you have any questions regarding this report or require additional information please call me at American Analytics.

Sincerely,

Viorel Vasile
Operations Manager

LABORATORY ANALYSIS RESULTS

Client: The Source Group, Inc. (SH)
Project No: 04-NDLA-007
Project Name: DFSP Norwalk Soil Remediation
Method: VOCs & OXYGENATES by GC/MS EPA 5035

AA Project No: A5331283
Date Received: 03/25/15
Date Reported: 04/01/15
Units: mg/kg

Table with 5 columns: Date Sampled, Date Prepared, Date Analyzed, AA ID No, Client ID No, Matrix, Dilution Factor, and MRL. Rows include sample dates (03/25/15, 03/30/15), IDs (5C25030-45 to 5C25030-48), client IDs (EX-14-W1-10 to EX-14-W2-5), matrix (Soil), and dilution factor (1).

8260B/5035 +OXYGENATES (EPA 8260B/5035) (continued)

Table listing various chemical compounds and their concentrations across four samples. Compounds include 1,1,2,2-Tetrachloroethane, Tetrachloroethylene (PCE), Toluene, 1,2,4-Trichlorobenzene, 1,2,3-Trichlorobenzene, 1,1,2-Trichloroethane, 1,1,1-Trichloroethane, Trichloroethylene (TCE), Trichlorofluoromethane (R11), 1,2,3-Trichloropropane, 1,1,2-Trichloro-1,2,2-trifluoroethane (R113), 1,3,5-Trimethylbenzene, 1,2,4-Trimethylbenzene, Vinyl chloride, o-Xylene, and m,p-Xylenes. All concentrations are below 0.0050 mg/kg.

Surrogates

Table showing surrogate recovery percentages for 4-Bromofluorobenzene (117%, 145% [3], 117%, 149% [3]), Dibromofluoromethane (112%, 127%, 109%, 119%), and Toluene-d8 (105%, 106%, 111%, 108%). %REC Limits are 70-140.

LABORATORY ANALYSIS RESULTS

Client: The Source Group, Inc. (SH)
Project No: 04-NDLA-007
Project Name: DFSP Norwalk Soil Remediation
Method: VOCs & OXYGENATES by GC/MS EPA 5035

AA Project No: A5331283
Date Received: 03/25/15
Date Reported: 04/01/15
Units: mg/kg

Table with 5 columns: Date Sampled, Date Prepared, Date Analyzed, AA ID No, Client ID No, Matrix, Dilution Factor, and MRL.

8260B/5035 +OXYGENATES (EPA 8260B/5035) (continued)

Table listing various chemical compounds and their concentrations across four samples, with a column for MRL.

Special Notes

- [1] = ** : Exceeds upper control limit
- [2] = QM-07 : The spike recovery was outside acceptance limits for the MS and/or MSD. The batch was accepted based on acceptable LCS recovery.
- [3] = S-GC : Surrogate recovery outside of control limits. The data was accepted based on valid recovery of the remaining surrogate(s).

Re : DFSP Norwalk Soil Remediation / 04-NDLA-007

A5331284 / 5C27002

Enclosed is an analytical report for the above-referenced project. The samples included in this report were received on 03/27/15 13:17 and analyzed in accordance with the attached chain-of-custody.

Unless otherwise noted, all analytical testing was accomplished in accordance with the guidelines established in our Quality Assurance Program Manual, applicable standard operating procedures, and other related documentation. The results in this analytical report are limited to the samples tested and any reproduction thereof must be made in its entirety.

If you have any questions regarding this report or require additional information please call me at American Analytics.

Sincerely,

Viorel Vasile

Operations Manager

**Re : DFSP Norwalk Soil Remediation / 04-NDLA-007
A5331398 / 5G02012**

Enclosed is an analytical report for the above-referenced project. The samples included in this report were received on 07/02/15 07:45 and analyzed in accordance with the attached chain-of-custody.

Unless otherwise noted, all analytical testing was accomplished in accordance with the guidelines established in our Quality Assurance Program Manual, applicable standard operating procedures, and other related documentation. The results in this analytical report are limited to the samples tested and any reproduction thereof must be made in its entirety.

If you have any questions regarding this report or require additional information please call me at American Analytics.

Sincerely,

Viorel Vasile
Operations Manager

**Re : DFSP Norwalk Soil Remediation / 04-NDLA-007
A5331297 / 5D08014**

Enclosed is an analytical report for the above-referenced project. The samples included in this report were received on 04/08/15 16:38 and analyzed in accordance with the attached chain-of-custody.

Unless otherwise noted, all analytical testing was accomplished in accordance with the guidelines established in our Quality Assurance Program Manual, applicable standard operating procedures, and other related documentation. The results in this analytical report are limited to the samples tested and any reproduction thereof must be made in its entirety.

If you have any questions regarding this report or require additional information please call me at American Analytics.

Sincerely,

Viorel Vasile
Operations Manager

**Re : DFSP Norwalk Soil Remediation / 04-NDLA-007
A5331396 / 5G02007**

Enclosed is an analytical report for the above-referenced project. The samples included in this report were received on 07/02/15 07:45 and analyzed in accordance with the attached chain-of-custody.

Unless otherwise noted, all analytical testing was accomplished in accordance with the guidelines established in our Quality Assurance Program Manual, applicable standard operating procedures, and other related documentation. The results in this analytical report are limited to the samples tested and any reproduction thereof must be made in its entirety.

If you have any questions regarding this report or require additional information please call me at American Analytics.

Sincerely,

Viorel Vasile
Operations Manager

**Re : DFSP Norwalk Soil Remediation / 04-NDLA-007
A5331335 / 5E06003**

Enclosed is an analytical report for the above-referenced project. The samples included in this report were received on 05/06/15 13:33 and analyzed in accordance with the attached chain-of-custody.

Unless otherwise noted, all analytical testing was accomplished in accordance with the guidelines established in our Quality Assurance Program Manual, applicable standard operating procedures, and other related documentation. The results in this analytical report are limited to the samples tested and any reproduction thereof must be made in its entirety.

If you have any questions regarding this report or require additional information please call me at American Analytics.

Sincerely,

Viorel Vasile
Operations Manager

**Re : DFSP Norwalk Soil Remediation / 04-NDLA-007
A5331362 / 5E29013**

Enclosed is an analytical report for the above-referenced project. The samples included in this report were received on 05/29/15 15:30 and analyzed in accordance with the attached chain-of-custody.

Unless otherwise noted, all analytical testing was accomplished in accordance with the guidelines established in our Quality Assurance Program Manual, applicable standard operating procedures, and other related documentation. The results in this analytical report are limited to the samples tested and any reproduction thereof must be made in its entirety.

If you have any questions regarding this report or require additional information please call me at American Analytics.

Sincerely,

Viorel Vasile
Operations Manager

**Re : DFSP Norwalk Soil Remediation / 04-NDLA-007
A5331333 / 5E01006**

Enclosed is an analytical report for the above-referenced project. The samples included in this report were received on 05/01/15 16:09 and analyzed in accordance with the attached chain-of-custody.

Unless otherwise noted, all analytical testing was accomplished in accordance with the guidelines established in our Quality Assurance Program Manual, applicable standard operating procedures, and other related documentation. The results in this analytical report are limited to the samples tested and any reproduction thereof must be made in its entirety.

If you have any questions regarding this report or require additional information please call me at American Analytics.

Sincerely,

Viorel Vasile
Operations Manager

**Re : DFSP Norwalk Soil Remediation / 04-NDLA-007
A5331364 / 5F03001**

Enclosed is an analytical report for the above-referenced project. The samples included in this report were received on 06/03/15 07:41 and analyzed in accordance with the attached chain-of-custody.

Unless otherwise noted, all analytical testing was accomplished in accordance with the guidelines established in our Quality Assurance Program Manual, applicable standard operating procedures, and other related documentation. The results in this analytical report are limited to the samples tested and any reproduction thereof must be made in its entirety.

If you have any questions regarding this report or require additional information please call me at American Analytics.

Sincerely,

Viorel Vasile
Operations Manager

Re : DFSP Norwalk Soil Remediation / 04-NDLA-007

A5331363 / 5F02002

Enclosed is an analytical report for the above-referenced project. The samples included in this report were received on 06/02/15 11:30 and analyzed in accordance with the attached chain-of-custody.

Unless otherwise noted, all analytical testing was accomplished in accordance with the guidelines established in our Quality Assurance Program Manual, applicable standard operating procedures, and other related documentation. The results in this analytical report are limited to the samples tested and any reproduction thereof must be made in its entirety.

If you have any questions regarding this report or require additional information please call me at American Analytics.

Sincerely,

Viorel Vasile

Operations Manager

Note: By relinquishing samples to American Analytix, client agrees to pay for the services requested on this chain of custody form and any additional client-requested analyses performed on this project. Payment for services is due within 30 days from the date of invoice. Sample(s) will be disposed of after 45 days following the submittal of the sample(s) to American Analytix.

APPENDIX C

2014 SOIL METALS INVESTIGATION

DATE: September 15, 2014
TO: Everett Bole, DLA Energy
FROM: Paul Parmentier and Neil Irish, The Source Group, Inc.
SUBJECT: **Evaluation of Metals in Shallow Soil
DFSP Norwalk
15306 Norwalk Boulevard, Norwalk, California**

The Source Group, Inc. (SGI) conducted an investigation at the DFSP Norwalk facility located at 15306 Norwalk Boulevard, Norwalk, California (see Figure 1) to evaluate the metals in the shallow soils. Previous investigations had focused on total petroleum hydrocarbons (TPH). An investigation of lead was also conducted as part of tank demolition, when shallow soil samples were collected prior to and following the demolition of storage tanks at the site. Those samples had been collected in areas of potential impact from the demolition activities: alongside tanks and along pipeline routes. A preliminary review of these demolition soil samples indicated a 95-percent upper confidence limit (95UCL) of lead concentration in soil of 89 milligrams per kilogram (mg/kg), which was well below the California Human Health Screening Level (CHHSL) of 320 mg/kg for commercial/industrial exposure scenario, and only slightly higher than the CHHSL of 80 mg/kg for residential exposure scenario. Subsequently, a wider investigation was proposed to evaluate metal concentrations at the site, including California Assessment Manual (CAM) metals. The following discusses the investigation of metals in shallow soil.

Soil Boring and Sampling Methods and Procedures

On July 14 and 15, 2014, SGI collected soil samples, backfilled, and restored the surface at 20 direct-push locations. Depending on the field conditions, four or five soil samples were collected from each location (see Figure 2) using a Geoprobe 6000 drill rig. Soil samples were collected at 0.5, 5, 10, and 20 feet below ground surface (bgs) and one sample was collected at 12 bgs. The locations were chosen to evaluate the possible presence metals throughout the site.

The 0.5-foot soil samples were collected manually in laboratory-supplied jars. The remaining soil samples were collected by an SGI Geologist in acetate sleeves, following appropriate decontamination procedures of the sampling equipment.

As the site has been previously investigated by multiple borings and Cone Penetrometer Testing (CPT), field observations were limited to general observations of lithology and to the presence of volatile organic compounds (VOCs) as measured using a portable photoionization Detector (PID). These field observations are reported in Appendix A, Table A 1. Samples were collected for metals analyses at the surface and at depths of 5, 10, 15 and 20 feet bgs. Samples with strong hydrocarbons odors or PID measurements over 50 parts per million (ppm) were also collected for TPH and VOC analyses.

The soil samples were placed on ice in a thermally insulated cooler and transported to American Analytics Laboratory located in Chatsworth, California, following chain-of-custody protocol. All soil samples were analyzed for Title 22 metals by USEPA Method 6010, and nine soil samples

were also analyzed for TPH by U.S. Environmental Protection Agency (USEPA) Method 8015 and volatile organic compounds (VOCs) by USEPA Method 8260B/5035. The analytical results are summarized in Tables 1, 2, and 3 and the laboratory analytical reports are provided in Appendix B.

After reaching total depth at each location, the boreholes were backfilled with hydrated granulated bentonite chips to grade. The investigation-derived waste (soil cuttings and decontamination water) was placed in United Nations (UN) rated 55-gallon steel drums, sealed, labeled, and stored onsite pending disposal.

Soil Boring Data Results and Findings

A total of 82 soil samples were collected from 20 soil boring locations on July 14 and 15, 2014, and submitted for laboratory analysis. The metals, TPH, and VOC analytical results are summarized in Tables 1, 2, and 3, respectively. Pertinent findings/observations are noted below:

- Metals;
- TPH; and
- VOCs.

Metals

To evaluate potential metals impacts in soil, the soil data was compared with CHHSLs. Under most circumstances, the presence of a chemical in soil, at concentrations below the corresponding CHHSLs can be assumed to not pose a significant health risk to people who may work (commercial/industrial CHHSLs) at the Site. Conversely, the presence of a chemical at concentrations in excess of a CHHSL does not indicate that adverse impacts to human health are occurring or will occur but rather suggests that further evaluation of impacts to human health concerns are warranted.

CHHSLs are based upon direct exposure to the soil contaminants via incidental ingestion, dermal contact and/or inhalation of vapors or dust in outdoor air. As such, they are limited in their applicability given the site-specific conditions whereby such exposure pathways are only likely to occur under a construction type of scenario if and when redevelopment activities are conducted at the Site. Table 2 summarizes the soil analytical results for metals in comparison to their respective CHHSLs. As Table 2 indicates, only arsenic and cadmium were detected above their respective commercial/industrial CHHSLs of 0.24 milligrams per kilogram (mg/kg) and 7.5 mg/kg, respectively. No other compounds were detected above their respective commercial/industrial CHHSLs.

Arsenic was detected in 80 of 82 soil samples, at concentrations ranging from 0.56 mg/kg to 34 mg/kg. Only two arsenic concentrations exceed the Southern California regional background arsenic concentration of 12 mg/kg that has been suggested as a useful risk management screening number by CalEPA Department of Toxic Substance Control (DTSC, Chernoff, Bosan, and Oudiz). Arsenic was detected at 5 feet bgs in soil sample DP-80007-1-5' and DP SW-1-5' at 34 mg/kg and 18 mg/kg, respectively. Although two of 82 arsenic concentrations are above the background concentration of 12 mg/kg, the 95 percent upper confidence level of the mean (95UCL) of the entire arsenic data set is 5.6 mg/kg, which is well below the background concentration of 12 mg/kg. If the arsenic data set is separated by depth the 95UCLs are 4.7 mg/kg at 0.5 feet bgs, 11 to 14 mg/kg at 5 feet bgs, 5.3 mg/kg at 10 feet bgs, and 5.3 to 5.4

mg/kg at 20 feet bgs. Although there are two locations with elevated arsenic, generally the arsenic at the Site is consistent with regional background concentrations.

Cadmium was detected in only two of 82 soil samples. Cadmium was detected at 5 feet and 20 feet bgs in soil samples DP-80001-1-5' and DP-80006-1-20' at 23 mg/kg and 8.4 mg/kg, respectively. These detected concentrations of cadmium are above the commercial/industrial CHHSL of 7.5 mg/kg.

For lead, the maximum detected concentration was 206 mg/kg. This concentration is well below the commercial/industrial CHHSL of 320 mg/kg, but above the residential CHHSL of 80 mg/kg. Only 14 of 92 shallow (0 to 5 feet bgs) soil samples had lead concentrations that exceeded the residential CHHSL. No deep (10 to 20 feet bgs) soil samples exceeded the residential or commercial/industrial CHHSL. Further evaluation of the lead dataset, indicated that the 95UCL concentration for shallow soil was 54 mg/kg, which is well below both the residential and commercial/industrial CHHSL. Based on the 95UCL, residual lead concentrations in soil do not exceed either the commercial/industrial or residential CHHSL.

TPH and VOCs

The TPH results indicate only one sample with concentrations over the site specific cleanup goal: sample DP-55004-2-20' contained 2,700 mg/kg TPH. This boring is located in an area of known contamination targeted for remediation.

Waste Classification

Lead was the only metal with concentrations greater than 10 times the soluble threshold limit concentration (STLC) limit. The STLC for lead is 5 mg/L; therefore, a STLC extraction was performed on samples with lead concentrations greater than 50 mg/kg. Lead concentrations were greater than 50 mg/kg in 4 samples (DP-NE-2-SURFACE, DP-55004-1-SURFACE, DP-80004-1-surface, and DP-80004-1-5'). The STLC extraction results ranged from 1.1 milligrams per liter (mg/L) to 3.7 mg/L. Testing for soluble concentrations of Cd in sample DP-80001-1-5' indicated no detectable STLC concentration. Therefore, soil is not considered hazardous waste under state regulations (Title 22 of the California Code of Regulations).

Conclusions

During this Site investigation, SGI completed 20 soil borings, and collected 82 discrete soil samples from depths ranging from 0.5 to 20 feet bgs. The investigation results indicate the following:

- Arsenic and cadmium were detected above their respective commercial/industrial CHHSLs of 0.24 milligrams per kilogram (mg/kg) and 7.5 mg/kg, respectively.
- Only two arsenic concentrations (sample DP-80007-1-5' at 34 mg/kg and sample DP SW-1-5' at 18 mg/kg) were above the Southern California regional background arsenic concentration of 12 mg/kg. The 95UCL of the entire arsenic data set is 5.6 mg/kg. In general, the arsenic at the Site is consistent with regional background concentrations.
- Cadmium was detected in only two of 82 soil samples (DP-80001-1-5' at 23 mg/kg and DP-80006-1-20' at 8.4 mg/kg). Cadmium impacts are very localized at the Site.
- Lead concentrations in shallow soil are below the commercial/industrial CHHSL. Lead concentrations in deep soil are below both the residential and commercial/industrial CHHSLs. The 95UCL concentrations of lead in shallow and deep soil of 50 mg/kg and 6 mg/kg, respectively, are well below both the residential and commercial/industrial CHHSLs.

Based on this evaluation of metals in shallow soil, metals are not contaminants of concern at the Site.

If you require additional information about this metals investigation, please contact me at (562) 597-1055.

Notes: Red font indicates concentrations exceeds the commercial/industrial CHHSL.
 a = CHHSL values are for chromium III / chromium VI
 b = HSC 25157.8 (criteria for land disposal)
 ft bgs = feet below ground surface
 mg/kg = milligrams per kilogram
 mg/L = milligrams per liter
 TTLC = Total Threshold Limit Concentration
 STLC = Soluble Threshold Limit Concentration
 CHHSL = California Human Health Screening Level
 ----- = not applicable
 <10 = not detected at or above the indicated laboratory detection limit
 Metals by EPA Method 6010B.
 Mercury by EPA Method 7471A.

Sb = antimony
 As = arsenic
 Ba = barium
 Be = beryllium
 Cd = cadmium
 Cr = chromium
 Co = cobalt
 Cu = copper
 Pb = lead
 Hg = mercury
 Mo = molybdenum
 Ni = nickel
 Se = selenium
 Ag = silver
 Tl = thallium
 V = vanadium
 Zn = zinc

* =DTSC has accepted 12 mg/kg as an acceptable background concentration for arsenic in soil at Southern Californian schools and that concentration is the screening level used at the site.

Notes: Detections are shown in **bold**.
 ft bgs = feet below ground surface.
 mg/kg = milligrams per kilogram
 C6-C8 = carbon chains ranging from C6 through C8.
 TPH = total petroleum hydrocarbons.
 <1.0 = not detected at or above the indicated laboratory reporting limit.
 Hydrocarbon Chain Identification by EPA Method 8015(M).

Gasoline Range Organics = C6-C10.
 Diesel Range Organics = C10-C28.
 Heavy Oil Range Organics = C28-C44.
 na = not applicable.
 RWQCB Guide 1996 screening levels; C4-C12= 100 mg/kg, C13-C22 = 100 mg/kg, C23-32 = 1,000 mg/kg.

Notes: Detections are shown in **bold**. ft bgs = feet below ground surface. ug/kg = micrograms per kilogram. <0.050 = not detected at or above the indicated laboratory reporting limit. Volatile Organic Compounds by EPA Method 8260B/5035. [2] = The spike recovery was outside acceptance limits for the MS and/or MSD. The batch was accepted based on acceptable LCS recovery.

Re : DFSP Norwalk / 04-NDLA-001

A5331083 / 4G15004

Enclosed is an analytical report for the above-referenced project. The samples included in this report were received on 07/15/14 10:35 and analyzed in accordance with the attached chain-of-custody.

Unless otherwise noted, all analytical testing was accomplished in accordance with the guidelines established in our Quality Assurance Program Manual, applicable standard operating procedures, and other related documentation. The results in this analytical report are limited to the samples tested and any reproduction thereof must be made in its entirety.

If you have any questions regarding this report or require additional information please call me at American Analytics.

Sincerely,

Viorel Vasile

Operations Manager

LABORATORY ANALYSIS RESULTS

Client: The Source Group, Inc. (SH)
Project No: 04-NDLA-001
Project Name: DFSP Norwalk

AA Project No: A5331083
Date Received: 07/15/14
Date Reported: 09/04/14

Special Notes

- [1] = ** : Exceeds upper control limit
- [2] = E : The concentration indicated for this analyte is an estimated value above the calibration range of the instrument. This value is considered an estimate (CLP E-flag).
- [3] = QM-07 : The spike recovery was outside acceptance limits for the MS and/or MSD. The batch was accepted based on acceptable LCS recovery.
