Paul Cho, P.G. Engineering Geologist California Regional Water Quality Control Board, Site Cleanup Unit III Los Angeles Region 320 West 4<sup>th</sup> Street, Suite 200 Los Angeles, CA 90013

Subject: Second Quarter 2015 Progress Report for Onsite Soil Management Defense Fuel Support Point Norwalk, 15306 Norwalk Boulevard, Norwalk, California (SCP No. 0286A, Site No. 16638)

Dear Mr. Cho:

On behalf of the Defense Logistics Agency - Energy (DLA Energy), The Source Group, Inc. is submitting this *Second Quarter 2015 Progress Report for Onsite Soil Management* at the Defense Fuel Support Point (DFSP) Norwalk site (Figure 1) as requested by the California Regional Water Quality Control Board (Regional Board) in a letter to DLA dated February 26, 2014. The *Onsite Soil Management Plan* was submitted on March 8, 2012, by Parsons; the Regional Board provided comments on April 10, 2012; and Parsons prepared responses that were submitted on May 17, 2012. Final approval from the Regional Board of the *Onsite Soil Management Plan* was included in the February 26, 2014, letter to the DLA.

As requested by the Regional Board, this report, in accordance with the *Onsite Soil Management Plan*, includes details on the impacted soil excavation, disposal, and onsite soil reuse activities. This report supplements on-going reporting on Phases of implementation of the soil remediation tasks at the site that include excavation, stockpiling, treatment and backfilling with associated sampling.

#### Soil Excavation and Soil Sampling

Excavation and soil sampling activities started on March 17, 2015. A summary of excavation areas, volumes and sampling is presented on Table 1. Figure 2 illustrates the location of the areas with soil excavation removal completed or in progress as of June 25, 2015. In addition, sampling also included baseline sampling of soil in areas scheduled for treatment, and this sampling is summarized in Table 2.

Tables 3 and 4 present a summary of clean soil stockpiles and soil treatment stockpiles. As further described in the next section, Table 5 summarizes off-site waste disposal.

No individual reports on excavation sampling, stockpile sampling or baseline sampling were prepared during the second quarter of 2015 (First report *"Phase 1 Excavations and Stockpile Sampling Report and Request for Authorization to Backfill"* filed July 15, 2015).

Tables 1 to 5 will be updated in future reports to maintain a full record of all site excavations, sampling and backfilling.

As summarized in Table 1, as of the end of Q2 2015, approximately 38,000 cubic yards of soil have been excavated, including 18,000 cubic yards of contaminated soil and 20,000 cubic yards of

presumed clean soil. Soil treatment, disposal, and confirmation of clean soil will be further documented in future reports.

As shown on Table 3 and Figure 2, 15 clean soil stockpiles were on site as of June 30, 2015, with five stockpiles on the eastern part of the site (CS-01, 02A, 10, 12 and 14) to be included as part of the Phase 1 soil completion tasks which also included proposed backfilling of excavations 3, 4, 5 and 14.

As shown on Table 4 and Figure 3, soil treatment resulted in 16 treatment piles in former storage basins 80002, 80004, 80006 and the Powerine Basin. The soil treatment equipment, initially set in former basin 80004, was moved to a more centrally located staging area in former basin 80007. The sampling of the four Powerine treatment piles was scheduled for early July 2015, to be documented in the Phase 2 report.

### Waste Management

Table 5 presents a summary of off-site disposal associated with the site remediation. In May, 790 tons of oily soil excavated from the northeast part of the site were hauled off-site by truck to the Waste Management facility in Simi Valley for disposal. The manifests are included in Appendix A. Table 5 will be updated in future reports.

### Health and Safety, Dust and Air Quality

All field activities were conducted in accordance with the site-specific Health and Safety Plan (HASP) and Occupational Safety and Health Administration (OSHA) regulations pertaining to hazardous waste site investigations (29 Code of Federal Regulations [CFR] 1910.120). The HASP includes protocols for safe work practices for the field portion of the project. All personnel working at the site are required to read, sign, and adhere to the requirements of the HASP. Tailgate safety meetings were held prior to fieldwork each day during which key aspects of the HASP and potential hazards were discussed. The HASP was in effect throughout the duration of field activities.

The soil handling and treatment were also managed under the South Coast Air Quality Management District (AQMD) site-specific permit, with occasional visit by AQMD inspector. In addition to VOC emissions mitigation, the soil handling operations were also conducted under strict dust mitigation measures.

### Proposed Third Quarter 2015 Soil Management Activities

Soil removal and on-site treatment is expected to continue during the third quarter of 2015, and will be reported in the next quarterly Progress Report for Onsite Soil Management.

If you have any questions or comments, please call me at (562) 597-1055.

Sincerely,

Paul Paumente

Paul Parmentier, PG 3915 Principal Geologist
