Subject: Phase 6 Excavations Confirmation Sampling Report and Request for Backfill
Defense Fuel Support Point Norwalk
15306 Norwalk Boulevard, Norwalk, California
(SCP NO. 0286A, Site ID NO. 16638)

Dear Mr. Cho:

The attached report presents the results of on-going sampling and analysis of soil samples collected at the former Defense Fuel Support Point (DFSP) Norwalk facility located at 15306 Norwalk Boulevard, Norwalk, California. This work has been conducted by The Source Group, Inc. (SGI) for the Defense Logistics Agency – Energy (DLA – Energy) as part of on-going the restoration of contaminated soil and groundwater. All work described herein has been completed under the regulatory oversight of the Regional Water Quality Control Board (RWQCB) and in accordance with the *Final - Soil Remedial Action Plan - Defense Fuel Support Point Norwalk*, dated November 30, 2014. The soil remediation tasks are progressing and Table 1 presents a summary of the first phases of the project; the summary provided in Table 1 will be updated in each subsequent submittal of future reports.

The attached *Phase 6 Excavations Confirmation Sampling Report* (Phase 6 report) presents confirmation sampling of two excavations located in former tank Basin 80008 and Basin 55004.

The confirmation sampling data documented in the attached Phase 6 report (and summarized in the enclosed table 2) indicate that the final soil sidewall shallow confirmation samples collected from excavations #35 (Tank Basin 80008) and #19/#37 (Tank Basin 55004) at depths between 0 and 10 feet below ground surface (bgs) do not contain concentrations of hydrocarbons above approved site cleanup goals. The need for any further remediation of residual hydrocarbons present in deeper soil will be further evaluated during development of final groundwater remediation strategies.

1962 Freeman Avenue
Signal Hill, California 90755

Telephone: (562) 597-1055
Facsimile: (562) 597-1070

Table 2 presents a summary of the site wide excavations of the project; the summary provided in Table 2 will be updated in each future report containing excavations.

Based on these findings, SGI and DLA Energy request that the RWQCB authorize backfilling of excavations #35 and #19/#37.

If there are any questions regarding the information provided please call me at (562) 597-1055.

Sincerely,

Paul Parmentier
Principal Hydrogeologist
The Source Group, Inc

1.0 INTRODUCTION

This report documents the confirmation sampling of two excavations associated with the soil excavation operations at the Defense Fuel Support Point Norwalk site located at 15306 Norwalk Boulevard, in Norwalk, California 90650 (Site; Figure 1).

This *Phase 6 Excavations Confirmation Sampling Report and Request for Authorization to Backfill* (Phase 6 Report) was prepared by The Source Group, Inc. (SGI), on behalf of the Defense Logistics Agency - Energy (DLA). This report is one of several completion reports resulting from site-wide excavations, soil segregation and soil treatment conducted at the Site.

The remediation of soil and groundwater and the removal of light non-aqueous phase liquids (LNAPL) has been on-going since 1995 and has resulted in the removal of the majority of the LNAPL from the shallow aquifer and the removal and destruction of thousands of pounds of hydrocarbons present in soil and groundwater using extractive and *in situ* treatment methods. The primary sources of contamination (tanks and pipelines) associated with former DLA – Energy operations have also been removed.

To implement additional source removal, DLA proposed excavation of soil with on-site treatment. The soil removal and proposed confirmation sampling was proposed in SGI's *Soil Remediation Action Plan* (Soil RAP; SGI, 2014), conditionally approved on January 7, 2015 by the RWQCB. The soil excavation is also conducted following the South Coast Air Quality Management District (SCAQMD) site-specific soil excavation and treatment permits No. 566483 and 568793.

On June 15, 2015, SGI submitted to RWQCB a *Proposed Addendum to the Soil Cleanup Goals* (SGI, 2015c) to clarify the hydrocarbon ranges and to incorporate longer-chain petroleum hydrocarbons (with >C25 carbon chain); RWQCB approved the new cleanup goals on July 16, 2015. The revised cleanup goals are summarized in Table 1, and include target concentrations for unrestricted soil reuse (strictest cleanup goals for soil to be used for backfilling at any depth) and for restricted soil reuse (less strict cleanup goals for backfilling at depths of 5 feet or less).

The soil treatment, confirmation sampling and backfilling procedures for the site were presented in SGI's June 15, 2015 *Revised Field Sampling and Analysis Plan and Sampling Strategy* (SGI, 2015a) and the June 15, 2015 *Work Plan for VOC Analyses Results Validation* (SGI, 2015b).

DLA is submitting excavation-specific reports of excavation confirmation sampling results to request RWQCB's approval to backfill. In addition, DLA will be submitting separate reports on clean soil piles and treated soil piles to be used for backfilling. This Phase 6 Report presents the details and results of excavations in former Basins 80008 and 55004; both excavations include an area of the Site scheduled to be transferred to the City of Norwalk. After RWQCB approval for reuse of clean and treated soil, DLA will submit to the RWQCB reports on the backfilling of excavations to document where clean and treated soil was reused at the site. When all site excavation has been completed, this Phase 6 Report will be incorporated by reference into a site-wide, soil remediation completion report.

This Confirmation Report includes data for excavation #35 located in former Above Ground Storage Tank (AST) Basin 80008 and excavations #19 and #37 located in former AST Basin 55004. Note that the initial shallow excavation completed in AST Basin 55004 was named EX-19, and that the excavation was further expanded and deepened and named EX-37.

2.0 EXCAVATIONS #35 AND #19/#37 SAMPLING AND RESULTS

This section presents confirmation sampling data for Excavations #35 and #19/#37.

2.1 Excavation Areas

Figure 2 presents a site map that provides the locations of Excavations #35 and #19/#37. This completion report provides excavation-specific information. Appendix A includes survey documentation for the excavations. OSHA was notified of the deep excavations, and inspections were conducted to ensure safe slopes, and restricted access was maintained by fencing around each excavation at the end of each day. In both excavations, the initial removal of hydrocarbon-contaminated soil was expanded laterally and vertically to address soil with high photo-ionization detector (PID) field readings, with soil exposed in many sections of the excavations registering PID readings of over 10,000 ppm.

2.2 Description of Excavations

Soil removal in Excavation #35 was started in April 2015. The removal of soil in Excavation #35 targeted hydrocarbons identified in previous soil boring DPT-88, DPT-89, DPT-90, DPT-91, DPT-140, DPT-141 and DTP-145, which contained petroleum hydrocarbons at concentrations above cleanup goals at depths of 10.5 feet to 25 feet below grade.

The final Excavation #35 encompassed an area of approximately 50,500 square feet, reaching a maximum depth of 25 feet in the center of the excavation; excavation sidewalls were completed with a two-to-one slope to ensure safe work conditions. The total soil volume removed from Excavation #35 is estimated to be approximately 29,000 cubic yards. Approximately 550 cubic yards of soil were segregated in the field as clean, with the remaining balance of soil determined to be contaminated and thus treated on site.

Soil removal in Excavation #19 was started March 31 2015. Excavation #19 targeted hydrocarbon identified in previous boring DPT-92, DPT-93, DPT-94, DPT-152, DPT-153 and DPT-154, which contained petroleum hydrocarbons at concentrations above cleanup goals at depths ranging from 0.5 feet to 25 feet below grade.

The original excavation, based on previous soil sampling data was named Excavation #19 and with a planned total depth of 10 feet. However, based on field observations made during the removal of contaminated soil that indicated high concentrations of residual petroleum contamination in sidewalls and the excavation floor, the excavation was expanded, with the deeper and expanded excavation referred to as Excavation #37. The final Excavation #37 encompassed an area of 35,000 square feet, reaching a maximum depth of 25 feet. An estimated total of approximately 13,000 cubic yards were excavated from Excavations #19/#37, with 23 cubic yards segregated in the field as clean soil, with the remaining balance of soil determined to be contaminated and thus treated on site

After reaching the final total depths, exploratory trenches were completed in the bottoms of Excavations #35 and #37. The purpose of these trenches was to confirm soil lithology extending from the base of the excavations (which was composed largely of silty sands) to the underlying sand horizon that previous borings indicated was present at approximately 30 feet below surface grade. When completed, the exploratory trenches were approximately 5 feet in depth and 5 feet in width, with the trenches oriented north-south and east-west. Upon completion of these exploratory trenches, native site soil (previously analyzed and confirmed to meet the most-stringent site cleanup cleanup goals) was used as backfill. The backfilling of the exploratory trenches was conducted under the oversight of a third-party geotechnical engineer.

2.3 Excavations #35 and #19/#37 Sampling Results

Excavation confirmation samples were collected in accordance with the *Revised Field Sampling and Analysis Plan and Sampling Strategy* (SGI, 2015a). The collection of confirmation soil matrix samples focused on documenting soil conditions from the surface to a depth of 10 feet. Thus, 0-10 feet soil confirmation samples were collected after field measurements indicated that the lateral extent of contamination to 10 feet below grade had been removed. Soil exposed in excavation sidewalls at depths greater than 10 feet were noted by field measurements to contain residual hydrocarbons, particularly at depths nearing the shallowest historical groundwater (approximately 25 feet below grade) and at deeper levels. A limited number of soil samples were collected from excavation sidewalls and/or bottoms at below 10 feet below grade to allow documentation of the residual concentrations of petroleum hydrocarbons that remain in the subsurface.

Soil samples were analyzed for total petroleum hydrocarbons (TPH - carbon chain characterization) using EPA Method 8015M and for volatile organic compounds (VOCs), including benzene, toluene, ethyl benzene, and xylenes, and gasoline range organics (GRO) using EPA Method 8260B with 5035 3-VOCs sample preservation method.

The results of the soil matrix samples analyses are listed in Tables 2 (TPH) and 3 (VOCs).

2.3.1 Excavation #35 Sampling (Figure 3)

- 117 initial sidewall samples were collected at depths of 3, 6, and 9 feet below the initial ground surface. Two samples in the east wall of the excavation (locations E5-3 and E5-6) were found to contain VOCs or hydrocarbons in excess of cleanup goals and therefore, additional soil was excavated and the locations were resampled. Additional step-out confirmation samples (E12-3 and E12-6) were found to contain VOCs and hydrocarbons at concentrations below cleanup goal. These results indicate that all shallow (0-10 ft) soil contamination has been removed in Excavation 35.
- Deeper sidewall samples collected for documentation of residual deeper hydrocarbon concentrations included:
 - Two additional samples (B00040 and B00041) were collected from the south end at depths of 30 and 33;

- 9 floor samples (EX-35-FL-1 to EX-35-FL-9) were collected from the floor of the excavation at a depth of 25 feet. These samples were found to contain TPH or VOC concentrations above cleanup goals.

2.3.2 Excavation #19/#37 Sampling (Figure 4)

- 42 initial sidewall samples were collected at depths of 3, 6 and 9 feet in the west wall and north wall on September 1, 2015. 45 sidewall samples were taken at depths of 3, 6, and 9 feet from the east wall and south wall on December 7, 2015. With the exception of sample S5-9, all shallow (<10 feet) sidewall samples indicated TPH and VOC concentrations below cleanup goals;
- At location S5-9, the soil around a 9-ft deep sample location on the southern wall of the excavation was further excavated on December 20, 2015. An additional confirmation sample, labeled S5-9A, was collected on December 21, 2015, analyzed, and the results indicate hydrocarbon concentrations below cleanup goals.
- These results indicate that all shallow (0-10 ft) soil contamination has been removed in Excavation #19.
- Eight deeper samples (B00083 to B00090) were also collected at depths of 15 and 20 feet to document the residual hydrocarbons in deeper soil. Six samples (B80084 to B80089) were found to contain VOCs or TPH in excess of cleanup goals;
- On November 19, 2015, four soil borings were also conducted to evaluate the lateral extent of deeper hydrocarbons. Two borings were located within Excavation #37 area and two borings were located north of Excavation #37. Twelve samples were collected at multiple depths from 12-25 feet below grade. The results of analyses of these samples are also listed on Tables 2 and 3.

2.4 Confirmation Sampling Results

Figures 3 and 4 are completion diagrams of the final completed excavations prior to backfilling with the location of confirmation samples and former above ground storage tanks. The purpose of each diagram is to facilitate the visualization and interpretation of the final sidewall and bottom characterization of each excavation area prior to backfill. Tables 2 and 3 present the results of confirmation samples and comparison with the cleanup goals for TPH and VOCs. Appendix B contains the laboratory reports.

The results of confirmation sampling of shallow soil (0 to 10 feet below grade) indicate that all contaminated soil in the excavations was removed laterally to non-detectable sidewall sample concentrations. Field observations and the results of deeper samples indicate that deeper soil locally contains residual hydrocarbons above cleanup goals, but the completed removal of high-concentration soil in the vadose zone in these two excavations represents a significant removal of hydrocarbon mass from the subsurface.

Residual concentrations in the vadose zone below a depth of 10 feet will be addressed as part of the site-wide LNAPL remediation approach required by the RWQCB. The Soil RAP (Section 7.11) included a provision for additional SVE, groundwater treatment and air sparging as potential technologies for addressing residual hydrocarbons after shallow soil removal. As described in the Soil RAP, additional remediation methods of saturated zone remediation, LNAPL removal and groundwater remediation will be evaluated to address residual contamination. The potential impact of residual, deep residual hydrocarbons to surface site receptors through vapor intrusion will also be addressed by the installation and testing of post-excavation and post-backfilling soil gas probes as required by the RWQCB.

2.5 Photo Documentation

Appendix C contains photo documentation of the excavations, and also includes aerial photographs of the excavation taken by a drone to document the excavation.

2.6 Backfilling

Backfilling of the excavations will be conducted after approval by the RWQCB of reuse of specific clean or treated soil piles.

2.7 Summary of Site-Wide Excavations

This Confirmation Report represents the third set of completed site excavations, following the earlier Phase I Excavations #3, #4, #5, and #14 and Phase 2 Excavations #1, #2 and #8. Table 4 presents a site-wide summary of excavation volumes and status.

3.0 CONCLUSIONS AND RECOMMENDATIONS

The results of confirmation sampling of shallow soil in Excavations #35 and #19/#37 indicate that all final in-situ shallow confirmation samples concentrations of TPH and VOCs were below cleanup goals.

Based on the results of excavations confirmation sampling, DLA Energy requests that the RWQCB approve backfilling of excavations #35 and #19/#37.

Notes: All concentrations are presented in milligrams per kilogram (mg/kg).
 Detections are shown in **bold**.
 Detections above cleanup goals are shown in **red**.
 ft bgs = feet below ground surface.
 C13-C22 = carbon chains ranging from C13 through C22.
 TPH = total petroleum hydrocarbons.
 <0.50 = not detected at or above the indicated laboratory reporting limit.
 --- = not applicable.
 Hydrocarbon Chain Identification by EPA Method 8015B(M).
 GRO by EPA Method 8260B/5035.

Notes: All concentrations are presented in milligrams per kilogram (mg/kg).
 Detections are shown in **bold**.
 Detections above cleanup goals are shown in **red**.
 ft bgs = feet below ground surface.
 <0.050 = not detected at or above the indicated laboratory reporting limit.
 The cleanup goal (0.5 - 5 feet below ground surface) for Xylenes (o-Xylene + m,p-Xylenes) = 3.77 mg/kg.
 The cleanup goal (> 5 feet below ground surface) for Xylenes (o-Xylene + m,p-Xylenes) = 2.76 mg/kg.
 Volatile Organic Compounds Identification by EPA Method 8260B/5035.

**Re : DFSP Norwalk Soil Remediation / 04-NDLA-007
A5331517 / 5J21007**

Enclosed is an analytical report for the above-referenced project. The samples included in this report were received on 10/21/15 09:54 and analyzed in accordance with the attached chain-of-custody.

Unless otherwise noted, all analytical testing was accomplished in accordance with the guidelines established in our Quality Assurance Program Manual, applicable standard operating procedures, and other related documentation. The results in this analytical report are limited to the samples tested and any reproduction thereof must be made in its entirety.

If you have any questions regarding this report or require additional information please call me at American Analytics.

Sincerely,

Viorel Vasile
Operations Manager

**Re : DFSP Norwalk Soil Remediation / 04-NDLA-007
A5331554 / 5K18011**

Enclosed is an analytical report for the above-referenced project. The samples included in this report were received on 11/18/15 11:37 and analyzed in accordance with the attached chain-of-custody.

Unless otherwise noted, all analytical testing was accomplished in accordance with the guidelines established in our Quality Assurance Program Manual, applicable standard operating procedures, and other related documentation. The results in this analytical report are limited to the samples tested and any reproduction thereof must be made in its entirety.

If you have any questions regarding this report or require additional information please call me at American Analytics.

Sincerely,

Viorel Vasile
Operations Manager

LABORATORY ANALYSIS RESULTS

Client: The Source Group, Inc. (SH)
Project No: 04-NDLA-007
Project Name: DFSP Norwalk Soil Remediation
Method: VOCs, OXY & TPHG by GC/MS EPA 5035

AA Project No: A5331554
Date Received: 11/18/15
Date Reported: 11/30/15
Units: mg/kg

Table with 5 columns: Date Sampled, Date Prepared, Date Analyzed, AA ID No, Client ID No, Matrix, Dilution Factor, and MRL. Rows include sample dates (11/17/15, 11/23/15), IDs (5K18011-45 to 48), client IDs (EX-35-E4-9 to 9), and matrices (Soil).

8260B/5035 +OXY+TPHG (EPA 8260B/5035) (continued)

Table listing chemical compounds and their concentrations across four samples. Compounds include Styrene, Toluene, and various chlorinated benzenes. Concentrations are shown as values or upper limits (e.g., <0.0050, 0.0022, 2.7).

Surrogates

Table showing surrogate recovery percentages for 4-Bromofluorobenzene, Dibromofluoromethane, and Toluene-d8, with a %REC Limits column (70-140).

**Re : DFSP Norwalk Soil Remediation / 04-NDLA-007
A5331582 / 5L10007**

Enclosed is an analytical report for the above-referenced project. The samples included in this report were received on 12/10/15 14:48 and analyzed in accordance with the attached chain-of-custody.

Unless otherwise noted, all analytical testing was accomplished in accordance with the guidelines established in our Quality Assurance Program Manual, applicable standard operating procedures, and other related documentation. The results in this analytical report are limited to the samples tested and any reproduction thereof must be made in its entirety.

If you have any questions regarding this report or require additional information please call me at American Analytics.

Sincerely,

Viorel Vasile
Operations Manager

**Re : DFSP Norwalk Soil Remediation / 04-NDLA-007
A5331568 / 5L03001**

Enclosed is an analytical report for the above-referenced project. The samples included in this report were received on 12/03/15 16:11 and analyzed in accordance with the attached chain-of-custody.

Unless otherwise noted, all analytical testing was accomplished in accordance with the guidelines established in our Quality Assurance Program Manual, applicable standard operating procedures, and other related documentation. The results in this analytical report are limited to the samples tested and any reproduction thereof must be made in its entirety.

If you have any questions regarding this report or require additional information please call me at American Analytics.

Sincerely,

Viorel Vasile
Operations Manager

**Re : DFSP Norwalk Soil Remediation / 04-NDLA-007
A5331460 / 5I02003**

Enclosed is an analytical report for the above-referenced project. The samples included in this report were received on 09/02/15 10:02 and analyzed in accordance with the attached chain-of-custody.

Unless otherwise noted, all analytical testing was accomplished in accordance with the guidelines established in our Quality Assurance Program Manual, applicable standard operating procedures, and other related documentation. The results in this analytical report are limited to the samples tested and any reproduction thereof must be made in its entirety.

If you have any questions regarding this report or require additional information please call me at American Analytics.

Sincerely,

Viorel Vasile
Operations Manager

LABORATORY ANALYSIS RESULTS

Client: The Source Group, Inc. (SH)
Project No: 04-NDLA-007
Project Name: DFSP Norwalk Soil Remediation
Method: VOCs, OXY & TPHG by GC/MS EPA 5035

AA Project No: A5331460
Date Received: 09/02/15
Date Reported: 09/14/15
Units: mg/kg

Table with 5 columns: Date Sampled, Date Prepared, Date Analyzed, AA ID No, Client ID No, Matrix, Dilution Factor, and MRL. Rows include sample dates (09/01/15, 09/03/15, 09/04/15), IDs (5I02003-29 to 5I02003-32), client IDs (EX-19-N4-6 to EX-19-N5-6), matrix (Soil), and dilution factor (1).

8260B/5035 +OXY+TPHG (EPA 8260B/5035) (continued)

Table listing chemical compounds and their concentrations across four samples. Compounds include Styrene, 1,1,1,2-Tetrachloroethane, 1,1,2,2-Tetrachloroethane, Tetrachloroethylene (PCE), Toluene, 1,2,4-Trichlorobenzene, 1,2,3-Trichlorobenzene, 1,1,2-Trichloroethane, 1,1,1-Trichloroethane, Trichloroethylene (TCE), Trichlorofluoromethane (R11), 1,2,3-Trichloropropane, 1,1,2-Trichloro-1,2,2-trifluoroethane (R113), 1,3,5-Trimethylbenzene, 1,2,4-Trimethylbenzene, Vinyl chloride, o-Xylene, and m,p-Xylenes. All concentrations are below 0.0050 mg/kg.

Surrogates

Table showing surrogate recovery percentages for 4-Bromofluorobenzene (118%, 114%, 110%, 119%), Dibromofluoromethane (114%, 94%, 99%, 97%), and Toluene-d8 (98%, 98%, 97%, 102%). %REC Limits are 70-140.

**Re : DFSP Norwalk Soil Remediation / 04-NDLA-007
A5331579 / 5L08015**

Enclosed is an analytical report for the above-referenced project. The samples included in this report were received on 12/08/15 09:07 and analyzed in accordance with the attached chain-of-custody.

Unless otherwise noted, all analytical testing was accomplished in accordance with the guidelines established in our Quality Assurance Program Manual, applicable standard operating procedures, and other related documentation. The results in this analytical report are limited to the samples tested and any reproduction thereof must be made in its entirety.

If you have any questions regarding this report or require additional information please call me at American Analytics.

Sincerely,

Viorel Vasile
Operations Manager

LABORATORY ANALYSIS RESULTS

Client: The Source Group, Inc. (SH)
Project No: 04-NDLA-007
Project Name: DFSP Norwalk Soil Remediation
Method: VOCs, OXY & TPHG by GC/MS EPA 5035

AA Project No: A5331579
Date Received: 12/08/15
Date Reported: 12/18/15
Units: mg/kg

Table with 5 columns: Date Sampled, Date Prepared, Date Analyzed, AA ID No, Client ID No, Matrix, Dilution Factor, and MRL. Rows include sample dates (12/07/15, 12/09/15, 12/10/15, 12/12/15), IDs (5L08015-33 to 5L08015-36), client IDs (EX-19-S4-9 to EX-19-S5-9), matrix (Soil), and dilution factors (1, 1000).

8260B/5035 +OXY+TPHG (EPA 8260B/5035) (continued)

Table listing chemical compounds and their concentrations across five samples. Compounds include Styrene, Tetrachloroethane, Toluene, Trichlorobenzene, Trichloroethylene (TCE), Trichlorofluoromethane (R11), Vinyl chloride, and Xylenes. Concentrations are mostly <0.0050 mg/kg, with 1,3,5-Trimethylbenzene at 10 mg/kg and 1,2,4-Trimethylbenzene at 16 mg/kg.

Surrogates

Table showing surrogate recovery percentages for 4-Bromofluorobenzene (94%), Dibromofluoromethane (115%), and Toluene-d8 (109%) across five samples, with a %REC Limits column showing 70-140%.

**Re : DFSP Norwalk Soil Remediation / 04-NDLA-007
A5331596 / 5L22015**

Enclosed is an analytical report for the above-referenced project. The samples included in this report were received on 12/22/15 12:19 and analyzed in accordance with the attached chain-of-custody.

Unless otherwise noted, all analytical testing was accomplished in accordance with the guidelines established in our Quality Assurance Program Manual, applicable standard operating procedures, and other related documentation. The results in this analytical report are limited to the samples tested and any reproduction thereof must be made in its entirety.

If you have any questions regarding this report or require additional information please call me at American Analytics.

Sincerely,

Viorel Vasile
Operations Manager

**Re : DFSP Norwalk Soil Remediation / 04-NDLA-007
A5331531 / 5J28012**

Enclosed is an analytical report for the above-referenced project. The samples included in this report were received on 10/28/15 09:47 and analyzed in accordance with the attached chain-of-custody.

Unless otherwise noted, all analytical testing was accomplished in accordance with the guidelines established in our Quality Assurance Program Manual, applicable standard operating procedures, and other related documentation. The results in this analytical report are limited to the samples tested and any reproduction thereof must be made in its entirety.

If you have any questions regarding this report or require additional information please call me at American Analytics.

Sincerely,

Viorel Vasile
Operations Manager

**Re : DFSP Norwalk Soil Remediation / 04-NDLA-007
A5331561 / 5K19008**

Enclosed is an analytical report for the above-referenced project. The samples included in this report were received on 11/19/15 17:59 and analyzed in accordance with the attached chain-of-custody.

Unless otherwise noted, all analytical testing was accomplished in accordance with the guidelines established in our Quality Assurance Program Manual, applicable standard operating procedures, and other related documentation. The results in this analytical report are limited to the samples tested and any reproduction thereof must be made in its entirety.

If you have any questions regarding this report or require additional information please call me at American Analytics.

Sincerely,

Viorel Vasile
Operations Manager

Special Notes

[1] = ** : Exceeds upper control limit

[2] = *** : Exceeds lower control limit

[3] = E : The concentration indicated for this analyte is an estimated value above the calibration range of the instrument. This value is considered an estimate (CLP E-flag).

Gasoline Range Organics (GRO) concentration represents the C4-C12 carbon range.
