- Appendix A      Results of Soil Gas Sampling, November 2015

## 1.0 INTRODUCTION

On behalf of our client, Defense Logistics Agency - Energy (DLA Energy), The Source Group, Inc. (SGI) is submitting this *Updated Work Plan for Post-Excavation Soil Gas Sampling* (Updated Work Plan). This Updated Work Plan includes revisions to the February 27, 2015 *Work Plan for DFSP Norwalk Treatment Cell Closure and Post Excavation Soil Gas Sampling* (February 2015 Work Plan; SGI 2015). The February 2015 Work Plan had been requested by Los Angeles Regional Water Quality Control Board (LARWQCB), via correspondence dated January 7, 2015, which provided conditions and related information requests associated with the Waste Discharge Requirement (WDR) for the former Defense Fuel Support Point (DFSP) Norwalk facility (Site).

Petroleum contaminated soil is present at numerous locations throughout the 50-acre DFSP Norwalk *facility*. As part of on-going site restoration activities approximately 80,000 tons of petroleum contaminated soil have been excavated and treated on-site via a biological technology; treated soil will be used as backfill material once cleanup goals have been achieved. The objectives of the soil remedial activities were to reduce the concentrations of petroleum hydrocarbons and related compounds that are present in vadose zone soil in order to facilitate site redevelopment and to accelerate the remediation of the underlying groundwater. As a condition of approval of the proposed on-site treatment and backfilling of treated soil, the LARWQCB requested that a soil gas survey be conducted after backfilling to confirm that shallow soil gas concentrations of hydrocarbons would not pose a human health risk through vapor intrusion.

The February 2015 Work Plan proposed the methodology for the installation of soil gas probes and was conditionally approved by the LARWQCB on May 15, 2015. This Updated Work Plan proposes a modified plan to reflect new regulatory requirements, site conditions, and the presence of existing soil gas probes.

In July 2015, the California Environmental Protection Agency Department of Toxic Substances Control (CalEPA/DTSC) issued an update to its 2012 *Advisory for Active Soil Gas Investigations*. The updated technical guidance provided in the July 2015 document is incorporated into this Work Plan. Additionally, backfilling of excavations within the eastern portion of the site are expected to be completed in March 2016, and specific locations for soil gas sampling based on these past excavations are proposed in this updated Work Plan.

In November 2015, SGI supervised the installation and sampling of 12 soil-gas probes located throughout the site. These soil-gas probes were installed to facilitate the initial screening of Site soil gas concentrations. These 2015 locations, in addition to previously installed probes and new probes, will be utilized for data collection in accordance with this Work Plan. The data and a map illustrating sample locations from the November event are included as Appendix A.

## **2.0 SCOPE OF WORK**

Soil gas sampling will be conducted to verify residual shallow soil gas concentrations after the completion of the site-wide excavation and backfilling of the upper 10 ft. of soil.

### **2.1 Pre-field Activities**

The following pre-field activities will be completed prior to mobilization to the field:

- The condition and accessibility of previous soil gas probes will be confirmed
- Underground Service Alert will clear the proposed sampling locations of underground utilities.

All field activities will be completed with safety as the foremost concern. In accordance with 40 CFR 1910.120, the existing Site-specific health and safety plan (HASP) will be reviewed and updated if necessary for the soil gas survey activities. All involved personnel, including onsite subcontractors and regulatory personnel, will be required to familiarize themselves with and sign the HASP in an attempt to minimize safety hazards. The HASP will identify the specific chemical compounds that may be encountered at the Site (BTEX and oxygenates), and present the chemical properties and a task-specific health and safety risk analysis.

### **2.2 Soil Gas Probe Installation**

#### **2.2.1 Existing Soil Gas Probes**

The twelve soil gas probes installed in 2015 were drilled and constructed following the 205 CalEPA Advisory. The installation and initial soil gas sampling are reported in Appendix A. These probes will be incorporated, along with the accessible probes previously installed at the site, as illustrated on Figure 2, with the proposed additional probes to present a comprehensive soil gas probes network.

#### **2.2.2 Proposed Additional Soil Gas Probes**

Methodologies used for the soil gas survey will be consistent with the July 2015 Active Soil Gas Advisory published by CalEPA. With a proposed general density of one soil gas location per quarter acre (DTSC 2005 Interim Final Guidance for the Evaluation of Subsurface Vapor Intrusion to Indoor Air), corresponding to approximately 5 sampling locations per former petroleum tank storage basin, a 5-ft, 10-ft and 15-ft soil gas probe will be installed by push-probe technology (Figure 1). Soil gas probes will be generally installed in the center of each former basin, and in each corner. The borings will be advanced to an approximate total depth of 15 feet bgs, and will be completed through the use of a truck mounted Geoprobe® direct push rig supplied and operated by a California C-57 licensed drilling company. Temporary soil gas probes will be nested and installed at the 5, 10, and 15-foot intervals at each location and will be completed as semi-permanent probes, with the 15-ft soil gas probe being a provisional sampling point. The soil gas

sampling probes will consist of sampling points surrounded by a sand pack approximately 0.5 foot thick, connected to Teflon® or Nylaflo® tubing that extends to the surface. Hydrated granular bentonite and/or grout will be placed atop the sand pack followed by neat cement up to the shallower probe or to the surface.

### **2.2.3 Purge Volume**

To ensure collection of a representative soil gas sample from temporary probes, three volumes of soil gas will be purged to rid the tubing/casing of atmospheric air. One purge volume is considered the summation of the volume of the sample container, internal volume of tubing used, volume of air in the probe/well casing, and the annular space (sand pack) around the probe tip (or screened interval).

### **2.2.4 Leak/Shut In Test**

At every soil gas probe, prior to the collection of a soil gas sample, difluoroethane or other compound accepted for use as a leak check detector will be applied to the tubing. All soil gas samples collected for analysis within the mobile laboratory will subsequently be analyzed for the detector compound. Prior to purging and/or sampling, a shut in test will be performed to evaluate the integrity of above ground sampling equipment.

### **2.2.5 Sample Collection and Analysis**

After purging the tubing or casing, and conducting the leak test, soil gas samples will be collected from the 5-ft and 10-ft probes in syringes to prevent the degradation of light-sensitive VOCs.

The syringes will be leak-checked before each use. All vapor samples collected for on-site analysis within syringes will be analyzed by the on-site mobile laboratory by Method TO-15 for VOCs and oxygenates, and for oxygen, CO<sub>2</sub> and methane). The target method detection limits are the California Human Health Screening Levels (CHHSLs). Samples will not be chilled and on-site samples will be analyzed within 30 minutes of sample collection. Samples that are collected for analysis in a fixed-base laboratory will be analyzed within 72 hours. If condensation is observed in any sample, the sample will be discarded and a new sample will be collected.

Based on the results of the 5-ft and 10-ft sampling, a sample of the 15-ft soil vapor may also locally be collected for analysis.

### **2.2.6 Quality Control**

Duplicate soil gas samples will be collected on a daily basis (one per day of sampling). These samples will be collected in a separate sample container directly after the original sample is taken. Duplicates will be collected at the same location and depth as the original

sample. Duplicate samples will be denoted with the letter "D" following the sample identification.

### **3.0 SCHEDULING AND REPORTING**

The utility clearing and field sampling will be implemented within one week of RWQCB approval, and the RWQCB will be notified a at least three days prior to the proposed sampling, which will be conducted within three field days of probe installation and five days of sampling and on-site laboratory analyses. Soil gas locations proposed in areas of recent backfilling will not be sampled until at least 15 days after backfilling, to allow for soil gas concentrations to equilibrate. It is anticipated that the sampling of the soil gas probes in the eastern part of the site will occur as an initial phase in March 2016, with probe installation and soil gas sampling in the western part of the site conducted in mid-2016.

The report on the soil gas survey will be submitted to the RWQCB within 60 days of the field sampling completion. The report will present the results of the soil gas investigation and will document the methodologies and results from soil gas sample collection, and laboratory analyses. The report will present the findings of the investigations and interpretations. Analytical data will be presented in tabular format and annotated on the appropriate figures. Figures will include a site location map, site map showing the sample locations, and a site map showing annotated VOC concentrations. The report will contain all pertinent documentation such as permits, laboratory reports, survey data, and chain-of-custody forms. The final report will include a comparison of the results with residential CHHSLs or additional vapor intrusion potential risk discussions or interpretations.

## 4.0 LIMITATIONS

This Work Plan was prepared for the exclusive use of Defense Logistics Agency - Energy (DLA Energy) for the express purpose of complying with regulatory directives for environmental investigation, in accordance with the scope of work, methodologies, and assumptions outlined in SGI's contract with DLA Energy and as applicable to the location of the proposed investigation. Any re-use of this work product, in whole or in part, for a different purpose, or by others must be approved by SGI and DLA Energy in writing. If any such unauthorized use occurs, it shall be at the user's sole risk without liability to SGI. To the extent that this plan is based on information provided to SGI by third parties, including DLA Energy, their direct-contractors, previous workers, and other stakeholders, SGI cannot guarantee the completeness or accuracy of this information, even where efforts were made to verify third-party information. SGI has exercised professional judgment to collect and present a scope of work and opinions of a scientific and technical nature. The opinions expressed are based on the conditions of the site existing at the time of this plan preparation, current regulatory requirements, and any specified assumptions. Findings or conclusions presented in this plan are intended to be taken in their entirety to assist DLA Energy and regulatory personnel in applying their own professional judgment in making decisions related to the property. SGI cannot provide conclusions on environmental conditions outside the completed scope of work. SGI cannot guarantee that future conditions will not change and affect the validity of the presented scope of work and any conclusions presented. No warranty or guarantee, whether expressed or implied, is made with respect to the data, observations, recommendations, and conclusions.

### Notes and Definitions

J	Detected but below the Reporting Limit; therefore, result is an estimated concentration (CLP J-Flag).
E	The concentration indicated for this analyte is an estimated value above the calibration range of the instrument. This value is considered an estimate (CLP E-flag).
DET	Analyte DETECTED
ND	Analyte NOT DETECTED at or above the reporting limit
NR	Not Reported
dry	Sample results reported on a dry weight basis
RPD	Relative Percent Difference

### Notes and Definitions

J	Detected but below the Reporting Limit; therefore, result is an estimated concentration (CLP J-Flag).
DET	Analyte DETECTED
ND	Analyte NOT DETECTED at or above the reporting limit
NR	Not Reported
dry	Sample results reported on a dry weight basis
RPD	Relative Percent Difference

RE: 15306 Norwalk Blvd. Norwalk, CA.

Enclosed are the results of analyses for soil gas samples received by Environmental Support Technologies laboratory on 11/25/15 17:27. The analyses were performed according to the prescribed method as outlined by EPA 8260B. A shut in test was performed, leak test was performed, equipment blank was run, and selected purge volume was 3PV. If you have any questions concerning this report, please feel free to contact Project Manager.

Sincerely,

*Ashley Flores*

RE: 15306 Norwalk Blvd. Norwalk, CA.

Enclosed are the results of analyses for soil gas samples received by Environmental Support Technologies laboratory on 12/02/15 16:41. The analyses were performed according to the prescribed method as outlined by EPA 8260B. A shut in test was performed, leak test was performed, equipment blank was run, and selected purge volume was 3PV. If you have any questions concerning this report, please feel free to contact Project Manager.

Sincerely,

*Ashley Flores*

Ashley Flores  
Project Manager

Environmental Support Technologies laboratories are certified by the California Department of Health Services (CDHS),  
Environmental Laboratory Accreditation Program (ELAP) No's. 2772, 2773, and 2767.

### Notes and Definitions

J	Detected but below the Reporting Limit; therefore, result is an estimated concentration (CLP J-Flag).
E	The concentration indicated for this analyte is an estimated value above the calibration range of the instrument. This value is considered an estimate (CLP E-flag).
DET	Analyte DETECTED
ND	Analyte NOT DETECTED at or above the reporting limit
NR	Not Reported
dry	Sample results reported on a dry weight basis
RPD	Relative Percent Difference
