Item	Description
1	Table 1 - Summary of Groundwater Elevations, June 2010 Monthly Monitoring Event
2	Table 2 - Summary of Groundwater Analytical Data, June 2010 Monthly Monitoring Event
3	Table 3 - Summary of Total Fluids and Groundwater Extraction Pump Operation, June 2010 Monthly Monitoring Event
4	Table 4 - Summary of Groundwater Analytical Data for Well GMW-14, First Semiannual 2010 Monitoring Event

## Remarks

On behalf of SFPP, L.P., an operating partnership of Kinder Morgan Energy Partners, L.P. (KMEP), AMEC Geomatrix, Inc. (AMEC), is transmitting the groundwater monitoring results for the June 2010 monthly monitoring event conducted at the DFSP Norwalk site. Groundwater elevations and historical analytical data for wells monitored during this monthly monitoring event are summarized in Table 1 and Table 2, respectively, and are briefly discussed below. The operation of SFPP's extraction wells during June 2010 is summarized in Table 3. A summary of first semiannual 2010 analytical results for well GMW-14 is presented in Table 4.

- 1) During this monthly monitoring event, Blaine Tech Services, Inc. (Blaine Tech) gauged wells GMW-36, GMW-O-15, GMW-O-16, GMW-O-18, GMW-O-19, and PZ-5 located in the southeastern area and purged and sampled wells GMW-O-16, GMW-O-19, and PZ-5. SFPP sampled the remaining three wells, GMW-36, GMW-O-15, and GMW-O-18, from the sample ports for these wells. In addition, Blaine Tech gauged and sampled well GMW-14 during this monthly event. Well GMW-14 could not be located during the semiannual monitoring event in May 2010.
- 2) Groundwater elevations have generally decreased (approximately 0.17 to 0.46 feet) in the area since the May 2010 monitoring event; one well indicated a slight increase in groundwater elevation (approximately 0.14 feet in PZ-5). The groundwater extraction system was in operation during this monitoring event, thus these groundwater levels do not reflect the static water level conditions in the area.

- 3) Wells GMW-36 and GMW-O-15 are used for total fluids extraction (TFE) but also have been used to monitor groundwater conditions within the extent of free product in the southeastern area. Free product has historically been detected in both of these wells. During this monitoring event, free product was detected in well GMW-36 at a thickness of 0.03 feet. Although, wells with free product are not typically sampled, well GMW-36 was sampled and the results are provided in this monitoring report. Reported concentrations of volatile organic compounds (VOCs), total petroleum hydrocarbons (TPH) quantified as gasoline (TPHg), and TPH quantified as fuel product (TPHfp) in the groundwater sample collected from well GMW-36 in June 2010 were higher than concentrations reported in April 2010 when free product was not detected. These June 2010 concentrations, however, are within the historical ranges for these analytes in well GMW-36. Reported concentrations of TPHg and TPHfp in the groundwater sample collected from well GMW-O-15 in June 2010 were lower than concentrations reported in May 2010. The concentration of TPHfp in well GMW-O-15 in June 2010 was approximately six times lower than the concentration reported in May 2010. Reported concentrations of benzene, ethylbenzene, methyl tert-butyl ether (MTBE), and tert-butyl alcohol (TBA) in the groundwater sample collected from well GMW-O-15 in June 2010 were higher than those reported in May 2010. Fluctuation in concentrations of fuel constituents in wells with a historical presence of free product is expected depending on various factors such as water level fluctuation, groundwater extraction, and sampling methods.
- 4) Wells GMW-O-16, GMW-O-18, and GMW-O-19, and PZ-5 are located outside the extent of free product and used to monitor the extent of dissolved-phase fuel constituents in groundwater in the southeastern area. Similar to the previous monthly monitoring events, VOCs, TPHg, and TPHfp were not detected in wells GMW-O-16 and GMW-O-19 with the exception that MTBE was detected at a low concentration in well GMW-O-16. MTBE was detected in well GMW-O-16 at a similar concentration in May 2010. Reported concentrations of VOCs and TPHg in well GMW-O-18 have decreased since October 2009 with an exception of TBA. The concentration of TPHfp in well GMW-O-18 has decreased since April 2010. To address the dissolved-phase constituents in this area, TFE was expanded to include well GMW-O-18 in April 2010. In addition, a work plan for additional groundwater assessment near well GMW-O-18 has been submitted to the RWQCB for review.
- 5) The TFE pumps in wells GMW-36, GMW-O-15, and GMW-O-18 are in operation in the southeastern area and continue to extract groundwater in the area for treatment. The TFE pump in well GMW-36 was temporarily off-line in May 2010 due to bio-fouling in the well. Wells GMW-36 and GMW-O-15 were redeveloped on June 17, 2010 and well GMW-36 resumed operation on June 17, 2010. Monthly groundwater monitoring in the southeastern area will continue and groundwater conditions will continue to be evaluated as additional groundwater monitoring and remediation system operation data are obtained.
- 6) Reported concentrations of TPHg and TPHfp in the groundwater sample collected from well GMW-14 were lower than concentrations reported in October 2009. No VOCs were detected in this well.
- 7) Two equipment blank samples were collected during this sampling event. No VOCs, TPHg, or TPHfp were detected at or above laboratory reporting limits in the equipment blank samples.

Please contact Thandar Phyu or Sherrick Baffert at (949) 642-0245 if you have any questions. Thank you.

**Notes**

1. Groundwater extraction pump was in operation; depth to groundwater was not measured.

**Abbreviations**

--- = not detected or not applicable.

feet btoc = feet below top of casing.

feet msl = feet above mean sea level based on the National Geodetic Vertical Datum of 1929.

NC = not calculated.

NM = not measured.

**Notes**

1. The total xylenes result is the sum of m,p-xylenes and o-xylenes when detected.
2. Groundwater sample collected through a sampling port.
3. Free product was present.
4. Split groundwater sample analyzed by Calscience Environmental Laboratories, Inc. Results were evaluated to laboratory method detection limits.

**Abbreviations**

--- = not analyzed or not applicable.  
 <5.0 = not detected at or above the laboratory reporting limit shown.  
 (D) = duplicate sample.  
 NS = well not sampled due to presence of free product.  
 J = The analyte was positively identified, the associated numerical value is the approximate concentration of the analyte in the sample.

1,2-DCA = 1,2-dichloroethane.  
 DIPE = di-isopropyl ether.  
 ETBE = ethyl tert-butyl ether.  
 MTBE = methyl tert-butyl ether.  
 TAME = tert-amyl methyl ether.  
 TBA = tert-butyl alcohol.  
 TPHfp = total extractable petroleum hydrocarbons quantified using a site fuel product standard.  
 TPHg = total purgeable petroleum hydrocarbons quantified using a gasoline standard (C4-C13).

Abbreviations

<5.0 = not detected at or above the laboratory reporting limit shown.

1,2-DCA = 1,2-dichloroethane.

DIPE = di-isopropyl ether.

ETBE = ethyl tert-butyl ether.

MTBE = methyl tert-butyl ether.

TAME = tert-amyl methyl ether.

TBA = tert-butyl alcohol.

TPHfp = total extractable petroleum hydrocarbons quantified using a site fuel product standard.

TPHg = total purgeable petroleum hydrocarbons quantified using a gasoline standard (C4-C13).
