CERTIFICATION STATEMENT

I declare under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted.

Based upon my inquiry of the person or persons who manage the system or those directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of a fine and imprisonment for knowing violations. [CWC Sections 13263, 13267, and 13268]

Executed on the 13th day of July at Signal Hill, California

Paul Parmentier, P.G.
Principal Geologist
The Source Group, Inc.

1.0 INTRODUCTION

On behalf of the Defense Logistics Agency - Energy (DLA Energy), The Source Group, Inc. (SGI) is submitting this *Second Quarter 2016 Waste Discharge Progress Report* at the Defense Fuel Support Point (DFSP) Norwalk site (Figure 1) as required by the California Regional Water Quality Control Board (RWQCB) Order Number 90-148, CI-10118.

This report, in accordance with the *Onsite Soil Management Plan* (Parsons, 2012), includes details on the impacted soil excavation, disposal, and onsite soil reuse activities.

The RWQCB approved the Waste Discharge Requirements Permit (WDR) on February 6, 2015. A one-year extension was requested on April 19, 2016, and on April 26, 2016, the RWQCB renewed the WDR.

In February 2015, SGI submitted the technical document titled *Field Sampling and Analysis Plan* (Plan), dated February 11, 2015 to the RWQCB, revised on April 10, 2015 and on June 15, 2015 (SGI, 2015a).

On July 9, 2015, SGI submitted to RWQCB a document to propose revised cleanup goals, which were approved by RWQCB on July 16, 2015.

During this quarter, SGI has submitted the following reports and work plans for phases of soil remediation and soil reuse:

- *Waste Discharge Requirements Progress Report First Quarter 2016, April 8, 2016*
- *Shallow Soil Closure Report, DLA-Energy Responsible Area of the Eastern Portion; April 18, 2016*
- *Phase 9 Stockpiles Confirmation Sampling Report, April 18, 2016*
 - Approved May 25, 2016.
- *First Quarter 2016 Progress Report for On-Site Soil Management; April 21, 2016*
- *Remediation Status Report-First Quarter 2016; April 22, 2016*
- *Human Health Risk Assessment, DLA-Energy Responsible Area of the Eastern Portion; May 31, 2016*
- *Addendum to Shallow Soil Closure Report, DLA-Energy Responsible Area of the Eastern Portion; May 31, 2016*

On June, 14, 2016, Dr. Wen Yang of the RWQCB conducted a site inspection. In addition to the Regional Board requirements, the soil treatment operations are also conducted in compliance with South Coast Air Quality Management District site-specific permit numbers 566483, 568793, and 578202.

2.0 LAND TREATMENT

A summary of the treatment soil piles sampling, volumes, management, and timeline is presented on Table 1. Figure 2 illustrates the location of the excavations, stockpiles, and soil treatment areas during the second quarter of 2016. Sampling included excavations, clean soil stockpiles, treated soil stockpiles, and sampling of the surface soil beneath treatment cells. As further described in the next section, Table 2 presents the results of progress sampling. Individual reports on excavation sampling, stockpile sampling, and baseline sampling were prepared during this reporting period. Tables 1 and 2 will be updated in future reports to maintain a full record of all site excavations, sampling and backfilling.

As summarized in Table 1, as of the end of the Second quarter 2016, approximately 65,602 cubic yards of soil have been excavated, placed into treatment piles, and partially reused. Soil treatment, disposal, and confirmation of clean soil will continue to be documented in future reports.

2.1 Cell Construction

2.1.1 Surface Soil Baseline Sampling

Prior to construction of each soil treatment pile, the soil beneath the future treatment stockpile was sampled—as shown in Table 1—and analyzed to determine existing levels of hydrocarbons present. After soil treatment has been completed, this soil is resampled and analyzed to evaluate if this native soil has been contaminated with hydrocarbons from the soil treatment operations.

Seven treatment cells in former basin 80004 were sampled after liner removal. All surface soils under the footprint of former treatment cells were screened with a PID. Samples were collected from each end of each cell and from the edge of the cells following a procedure agreed upon with Paul Cho of RWQCB. The results of the post-treatment sampling for the eastern part of former basin 80004 were reported in the May 31, 2016 *Addendum to Shallow Soil Closure Report*, and are included as Appendix D. The sampling indicated that the treatment cell operation did not impact the soil.

2.1.2 HDPE Liners

To further protect the soil beneath the treatment piles, 30 mil high-density polyethylene (HDPE) liners were placed six inches below the ground surface beneath the treatment piles.

2.1.3 Cell Construction

A total of, 34 soil treatment cells have been constructed on site. These consist of six treatment cells in the Powerine Basin, seven treatment piles in each of the 80004, 80006 and 80013 basins, five cells in the 80002 basin, and two in the 80001 basin.

2.1.4 Cells: Plastic Cover

Once the treated soil has been placed in each treatment pile, the pile is covered with two layers of 6mm heavy duty plastic sheets secured with sand bags.

2.2 Storm Water Runoff Control

The treatment cells are located within bermed areas. Where bermed areas are breached to allow for construction equipment access, a slope is maintained to ensure control of runoff. During the second quarter 2016 there was one rain event (April 7, 2016). Minor puddling occurred during this event and storm water did not flow into the storm water collection areas that were constructed in September 2015.

All site-watering activities (conducted to control dust) are controlled to prevent runoff. Approximately weekly, a street sweeper service is also contracted to reduce off-site dragging of soil.

2.3 Soil Treatment

Contaminated soil is treated via processing through an Earth Cleaning Machine provided by Bulldog Green Remediation, Inc. (BGR). As soil is fed into the machine, a mixture of non-toxic surfactant and non-pathogenic microbes is mixed throughout the soil. The soil is then discharged for placement into piles within the treatment cells, as shown in the attached photos. Soil moisture is monitored in several ways, including monthly sampling and laboratory testing. Additional water and nutrients were not added to the soil piles during the treatment period.

2.3.1 Soil Moisture Monitoring

Soil moisture was monitored by visual inspection of moisture condensation on the inside surface of the pile cover, and confirmation by laboratory analyses (Table 2).

2.3.2 Additional Water and Nutrients Addition

Based on field and laboratory testing results, no water and no nutrients were added to the treatment soil piles during the Second quarter 2016.

2.3.3 Soil Treatment Volume

As of June 30, 2016, approximately 65,602 cubic yards of soil have been treated with 41,563 cubic yards approved for reuse by RWQCB. Volumes for each treatment stockpile are also reported to RWQCB for each phase of soil reuse. Table 1 lists the excavated treatment soil pile volumes.

2.4 Progress Sampling

Progress sampling events took place monthly for each soil pile under treatment in April, May, and June, typically during the second week of each month. Table 2 lists the results for moisture, microbiology plate count, and TPH. The laboratory reports are included in Appendix A and B.

Soil piles are also inspected daily during site operations. Inspection logs are included in Appendix C.

2.5 Acceptance Sampling and Post-Treatment Sampling

Acceptance sampling results were submitted to RWQCB in several confirmation sampling reports, and RWQCB approved soil reuse based on segregation of each set of treated soil stockpiles.

2.6 Exceptions to the Order

Aside from the time limit extension for the 2015 to the 2016 WDR permit mentioned in Section 1.0, there were no exceptions to the Regional Board Order during this reporting period. The site's land treatment operations still fall within the order's guidelines of under 100,000 cubic yards treated.

**Re : DFSP Norwalk Soil Remediation / 04-NDLA-007
A5331755 / 6D19016**

Enclosed is an analytical report for the above-referenced project. The samples included in this report were received on 04/19/16 16:15 and analyzed in accordance with the attached chain-of-custody.

Unless otherwise noted, all analytical testing was accomplished in accordance with the guidelines established in our Quality Assurance Program Manual, applicable standard operating procedures, and other related documentation. The results in this analytical report are limited to the samples tested and any reproduction thereof must be made in its entirety.

If you have any questions regarding this report or require additional information please call me at American Analytics.

Sincerely,

Viorel Vasile
Operations Manager

Special Notes

- [1] = ** : Exceeds upper control limit
- [2] = E : The concentration indicated for this analyte is an estimated value above the calibration range of the instrument. This value is considered an estimate (CLP E-flag).
- [3] = S-GC : Surrogate recovery outside of control limits. The data was accepted based on valid recovery of the remaining surrogate(s).

Gasoline Range Organics (GRO) concentration represents the C4-C12 carbon range.

**Re : DFSP Norwalk Soil Remediation / 04-NDLA-007
A5331810 / 6E12006**

Enclosed is an analytical report for the above-referenced project. The samples included in this report were received on 05/12/16 14:16 and analyzed in accordance with the attached chain-of-custody.

Unless otherwise noted, all analytical testing was accomplished in accordance with the guidelines established in our Quality Assurance Program Manual, applicable standard operating procedures, and other related documentation. The results in this analytical report are limited to the samples tested and any reproduction thereof must be made in its entirety.

If you have any questions regarding this report or require additional information please call me at American Analytics.

Sincerely,

Viorel Vasile
Operations Manager

Special Notes

- [1] = ** : Exceeds upper control limit
- [2] = *** : Exceeds lower control limit
- [3] = S-01 : The surrogate recovery for this sample is not available due to sample dilution required from high analyte concentration and/or matrix interference's.
- [4] = S-GC : Surrogate recovery outside of control limits. The data was accepted based on valid recovery of the remaining surrogate(s).

Gasoline Range Organics (GRO) concentration represents the C4-C12 carbon range.

**Re : DFSP Norwalk Soil Remediation / 04-NDLA-007
A5331851 / 6F15008**

Enclosed is an analytical report for the above-referenced project. The samples included in this report were received on 06/15/16 14:43 and analyzed in accordance with the attached chain-of-custody.

Unless otherwise noted, all analytical testing was accomplished in accordance with the guidelines established in our Quality Assurance Program Manual, applicable standard operating procedures, and other related documentation. The results in this analytical report are limited to the samples tested and any reproduction thereof must be made in its entirety.

If you have any questions regarding this report or require additional information please call me at American Analytics.

Sincerely,

Viorel Vasile
Operations Manager

Notes: All concentrations are presented in milligrams per kilogram (mg/kg).
 Detections are shown in **bold**.
 <0.050 = not detected at or above the indicated laboratory reporting limit.
 The cleanup goal (0.5 - 5 feet below ground surface) for xylenes (o-xylene + m,p-xylenes) = 3.77 mg/kg.
 The cleanup goal (> 5 feet below ground surface) for xylenes (o-xylene + m,p-xylenes) = 2.76 mg/kg.
 Volatile Organic Compounds Identification by EPA Method 8260B/5035.
 GRO by EPA Method 8260B/5035.
